## Occupational Injuries & Illnesses in Maine, 1996

Bureau of Labor Standards

By far, the most prevalent form of illness case form in Maine's workplaces is disorders associated with repeated trauma. This includes mainly cases involving tendonitis, bursitis, and tenosynovitis. These are conditions that develop over a period of time from repeated motion such as assembly work, keyboard operations, etc.

Of the 6,575 illness cases in Maine in 1996, 5,348 (81.3%) involved repeated trauma.

## Occupational Injuries and Illnesses, 1996

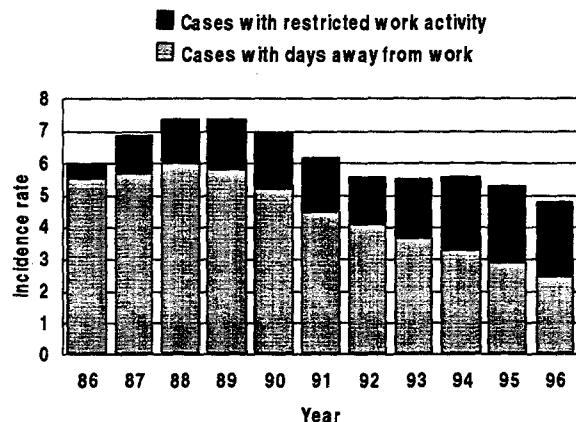

The following data represent highlights from the annual survey of occupational injuries and illnesses contained in the publication *Occupational Injuries and Illnesses in Maine, 1996*.

Maine's private sector employers experienced a record low injury and illness incidence rate in 1996. Cases occurred at a rate of 9.4 per 100 full-time workers.

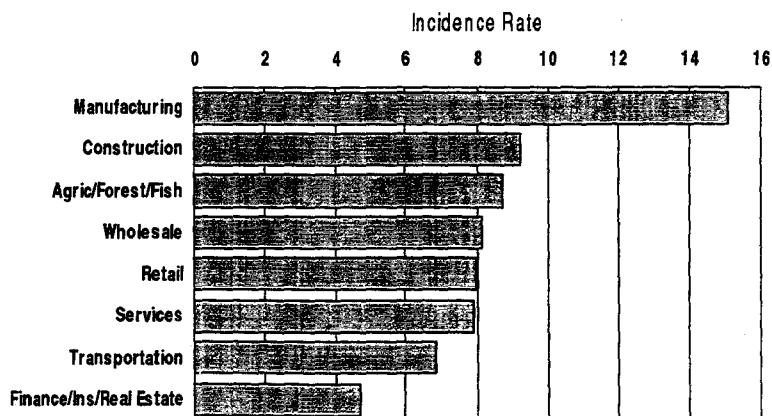

Over the past several years, an interesting pattern has emerged in the recorded severity of injuries and illnesses. The incidence rate for the more severe cases (those with days away from work)

declined 58% since 1988. However, the incidence rate for the less severe cases that resulted in restricted work activity increased 64%. This result indicates a shift in the way employers treat cases once they occur. Return-to-work programs, which have become more popular, may have contributed to this shift.

Incidence rates can vary from industry to industry. Manufacturing, Construction, and Agriculture, Forestry & Fishing have consistently higher incidence rates than other industries due to the inherent dangers that exist within these industries. On the other hand, industries such as Finance, Insurance & Real Estate have relatively low incidence rates due to the low risk nature of the work.

## **Foreword**

Information in this publication represents 25 years of data collection from the annual U.S. Bureau of Labor Statistics survey of occupational injuries and illnesses. The information

- \* Assists OSHA in targeting industries considered the most hazardous based on the incidence rates.
- \* Provides historical information to researchers, educators, and policy makers for trend and pattern analysis.
- \* Aids employers in evaluating their own safety record by providing comparable industry rates.
- \* Targets training efforts by safety and health officials.

We would like to thank the nearly 3,000 private and public employers in the state of Maine who responded to the 1996 survey.

For answers to questions concerning the data in this publication or for information on the various safety and health services offered by the Department of Labor, please contact us at:

## Introduction

The annual survey of occupational injuries and illnesses was created as a result of the Occupational Safety and Health (OSH) Act of 1970. The objective of the OSH Act was to "assure, so far as possible, every working man and woman in the nation safe and healthful working conditions and to preserve our human resources."

The U.S. Department of Labor, Bureau of Labor Statistics, was delegated the responsibility for developing and maintaining an effective statistical program to collect, compile, and analyze occupational safety and health data as required by the OSH Act (Public Law 91-956). The Maine Department of Labor, Bureau of Labor Standards was delegated the responsibility to perform the annual survey which collects injury and illness data from a sample of employers.

Under this Act, employers are required to maintain records of all work-related deaths, illnesses, and injuries that involve days away from work, restriction of work or motion, loss of consciousness, temporary transfer to alternate work, or medical treatment beyond First Aid. The goal is to encourage both employers and employees to maintain safe and healthful working conditions.

The Maine Safety & Health Act, 26 MRSA Sect. 565 as amended by P.L. 1989 CH. 712, requires employers in Maine's public sector (state & local governments) to maintain injury and illnesses records.

Industries included in the survey are:

1. Agriculture, Forestry, and Fishing	6. Wholesale Trade
2. Mining	7. Retail Trade
3. Construction	8. Finance, Insurance, and Real Estate
4. Manufacturing	9. Services
5. Transportation and Public Utilities	

Excluded from the survey are self-employed individuals, churches, farms with fewer than 11 employees, employees regulated by other federal safety and health laws, and federal government agencies.

Data for Mining and Railroads are provided by the U.S. Department of Labor, Mine Safety and Health Administration and the U.S. Department of Transportation Federal Railroad Administration.

Reporting units are classified into industries by their principal product or activity. The data are tabulated according to the 1987 edition of the Standard Industrial Classification (SIC) Manual.

**Note:** In this report, private sector results and public sector results are displayed separately.

## **Private Sector Results**

## 1996 Occupational Safety & Health Survey Summary

### Private Sector

- Maine's private sector recorded a record low total case incidence rate of 9.4 cases per 100 full-time workers in 1996. After adjustment to mix of U.S. industries for comparison purposes, the incidence rate was 9.0. The incidence rate for the U.S. was 7.4.  
*Note:* The sum of the case type incidence rates may not equal the total due to rounding.
- **Injury and illness incidence rates:**

	<u>1995</u>	<u>1996</u>
Total case rate	9.7	9.4
Lost workday case rate	5.3	4.8
Cases with days away from work	2.9	2.5
Cases with restricted work activity	2.4	2.3
Cases without lost workdays	4.4	4.7
- **Industries posting increases in incidence rates:**

Services	7.5	7.9
Retail	7.6	8.0
Transportation & Public Utilities	6.8	6.9
- **Industries posting decreases in incidence rates:**

Construction	10.9	9.2
Agriculture, Forestry & Fishing	9.8	8.7
Wholesale	9.0	8.1
Manufacturing	16.4	15.1
- **Number of OSHA recordable cases:**

Injuries and illnesses	34,474	34,478
Injuries	28,666	27,902
Illnesses	5,808	6,575
- **Illness case types:**

Total	5,808	6,575
Repeated Trauma	4,624	5,348
Skin Diseases/Disorders	409	432
Other	275	354
Respiratory Conditions	249	257
Physical Agents	202	124
Dust Diseases of the Lungs	3	38
Poisoning	45	22

## Injuries and Illnesses

Cases are categorized based on the severity of the injury or illness (see Appendix F - Glossary for definitions). Cases resulting in days away from work are considered the most serious cases. Cases with restricted work activity are considered somewhat less severe. Together, these two severity types comprise cases with lost workdays. Cases resulting in no lost time from work are considered the least severe cases.

In 1989, more cases occurred than in any other year. A total of 53,064 injuries and illnesses occurred with 21,241 cases resulting in days away from work. Only 6,054 cases resulted in restricted work activity only. However, since 1989 the number of cases resulting in restricted work activity has steadily increased while the number of cases resulting in days away from work decreased to a point where they are occurring at nearly equal levels. Return-to-work programs and increased knowledge of OSHA recordkeeping may be the reason behind this shift.

**Text Table A. Injury and Illness Cases by Case Type, Maine, 1972-1996**

<u>Survey Year</u>	<u>Total Cases</u>	<u>Cases with Lost Workdays</u>	<u>Cases with Days Away From Work</u>	<u>Cases with Restricted Workdays</u>	<u>Cases Without Lost Workdays</u>

1996	34,478	17,472	8,962	8,509	17,006

## Injury and Illness Rates

OSHA recordable injuries and illness in Maine's private sector workplaces in 1996 occurred at a rate of 9.4 cases per 100 full-time workers. This is the lowest incidence rate for total cases since rates were first published in 1972. The rate of 9.4 is 3.1% lower than the previously low incidence rate of 9.7 recorded just last year (See Text Table B).

Lost workday cases (cases involving days away from work or days of restricted work activity or both) occurred at a rate of 4.8 cases per 100 full-time workers, a decrease of 9.4%. The rate for lost workday cases has decreased in six of the last seven years. However, Figure 1 shows a steadily decreasing rate for cases with days away from work but an equally strong increase in the rate for cases resulting in restricted work activity. This trend has become more apparent in recent years.

The incidence rate for cases that did not result in lost time, but were serious enough to require medical treatment beyond first aid, was 4.7 cases per 100 full-time workers in 1996, an increase of 6.8% over 1995.

---

1996	9.4	4.8	2.5	2.3	4.7

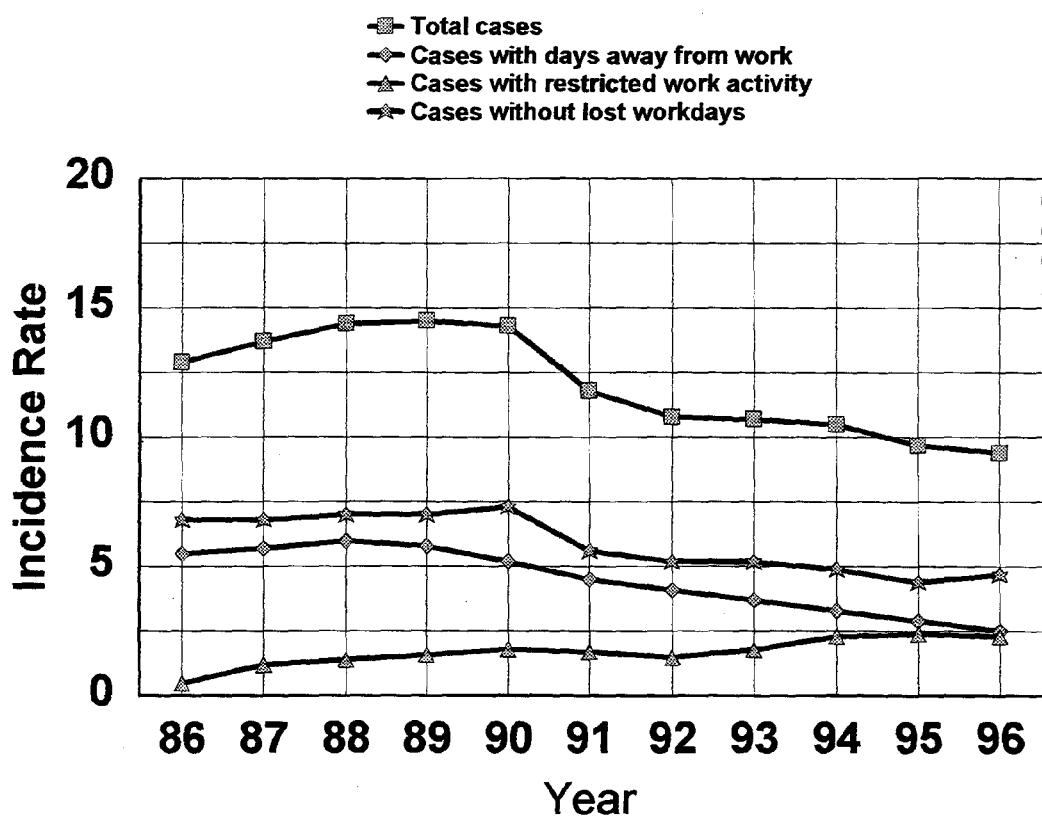

---

Text Table B lists the case rates for injuries and illnesses combined from 1972 to 1996. Of note is the incidence rate of 2.5 for cases with days away from work. This rate has declined 58% since 1988 and has been at record lows for the last four years.

The incidence rate for cases resulting in restricted work activity has remained steady for the last three years. However, the rate for these restricted activity cases had steadily increased since the first annual survey in 1972. The advantage of return-to-work and light-duty programs may have affected this rate. The results suggest a shift in the way in which injuries and illnesses were handled once they occurred. When an employee suffered a work-related injury or illness, the employee was put on light duty activity or alternative work more often than in the past, thus increasing cases with restricted duty and lowering the cases with days away from work (see Figure 1).

**Figure 1. Injury and Illness Incidence Rates by Case Type, Maine, 1986-1996**

Number of injuries and illnesses per 100 full-time workers

## Injury Rates

In 1996, private sector workplaces recorded 7.6 occupational injuries per 100 full-time workers, a decrease of 6.2% from 1995. This rate equals the lowest incidence rate ever recorded for injuries. The previous low occurred last year when 8.1 cases per 100 full-time workers was recorded.

The incidence rate for injuries without lost time (medical treatment beyond first aid) in 1996 was 3.6 cases per 100 full-time workers. This rate equals the lowest incidence rate for this category which was also recorded in the previous year.

In 1996, a record low 80.9% of cases were injuries. In 1995, 83.2% of all cases were injuries.

**Text Table C. Injury Incidence Rates by Case Type, Maine, 1972-1996**

<u>Survey Year</u>	<u>Total Injury Cases</u>	<u>Cases with Days Away From Work</u>	<u>Cases with Restricted Workdays</u>	<u>Cases without Lost Workdays</u>	<u>Percent of all Cases that were Injuries</u>

## Industry Division

Industry divisions are defined by using the Standard Industrial Classification (SIC) system, 1987 version (See Appendix F: Glossary). Data is provided for nine industry divisions.

1. Agriculture/Forestry/Fishing	5. Wholesale Trade
2. Construction	6. Retail Trade
3. Manufacturing	7. Finance, Insurance, & Real Estate
4. Transportation & Public Utilities	8. Services

In 1996, incidence rates for total OSHA recordable cases increased in three major industries and decreased in four others. One industry was not publishable in 1995 and was not compared.

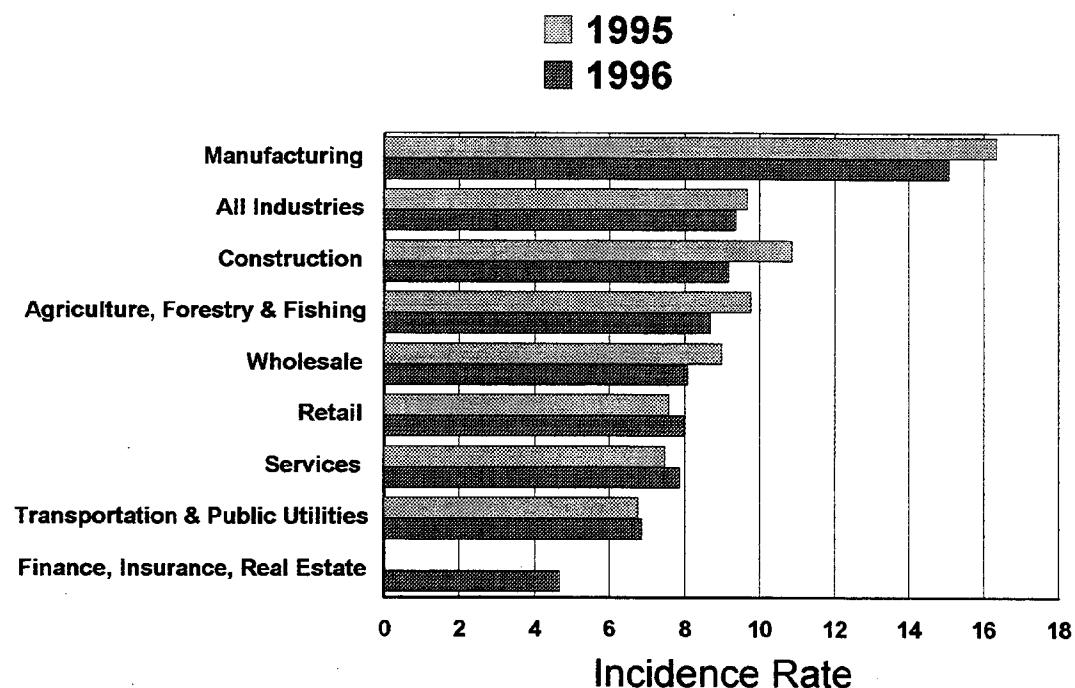

**Text Table F. Total Case Incidence Rates by Case Type, by Industry Division,  
Maine, 1995-1996**

2. Construction	10.9	9.2	-15.6	5.8	4.9	-15.5	5.1	4.3	-15.7
3. Manufacturing	16.4	15.1	-7.9	9.0	8.0	-11.1	7.4	7.0	-5.4
4. Transportation & Public Utilities	6.8	6.9	1.5	4.0	3.9	-2.5	2.8	3.0	7.1
5. Wholesale	9.0	8.1	-10.0	5.0	4.9	-2.0	3.9	3.2	-17.9
6. Retail	7.6	8.0	5.3	3.7	3.9	5.4	3.9	4.1	5.1
7. Finance, Insurance & Real Estate	np	4.7	-	np	0.7	-	np	4.0	-
8. Services	7.5	7.9	5.3	4.3	3.9	-9.3	3.2	4.0	25.0

np = not publishable

Industries that experienced decreases in total case incidence rates were in Construction, 15.6 percent; Agriculture, Forestry & Fishing, 13.9 percent, Wholesale, 10.0 percent, and Manufacturing, 7.9 percent. Industries that experienced an increase in total case incidence rates were Retail, 5.3 percent, Services, 5.3 percent, and Transportation & Public Utilities, 1.5 percent.

**Figure 3. Total Case Incidence Rates by Industry Division, Maine, 1995-1996**

Note: Finance, Insurance & Real Estate was not statistically reliable in 1995 and was not compared.

## Employment and Hours Worked

Annual average employment in Maine's private sector workplaces increased 3.0% in 1996. This resulted in a gain of 13,400 additional workers to Maine's economy. Total hours worked by these employees increased 2.9% to over 730 million hours in 1996.

The largest increase in the number of workers occurred in Services which gained 13,100 workers in 1996. Finance, Insurance, and Real Estate was the second leading gainer with 1,700 additional workers. Construction was third with 1,300 additional workers.

Two industries experienced a decrease in average employment in 1996. Manufacturing lost 3,000 employees and Retail Trade lost 1,500 employees.

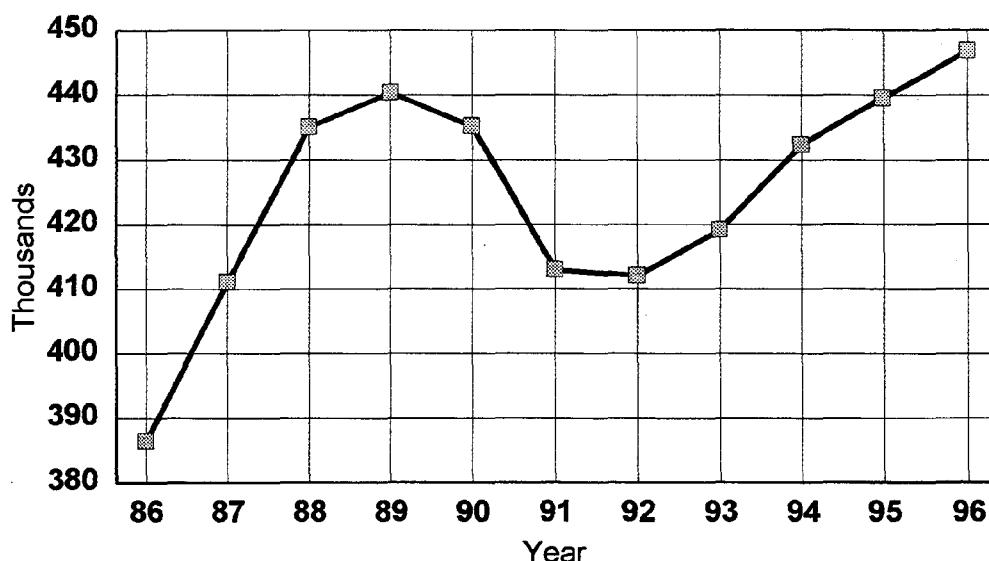

Two industries experienced a decline in total hours worked in 1996. In Manufacturing, employees worked 6.4 million fewer hours while Agriculture, Forestry, and Fishing employees worked 200,000 fewer hours.

**Text Table G: Employment and Total Hours Worked by Industry Division,  
Maine, 1995-1996**

<u>Industry (SIC)</u>	Employment (Thousands)			Total Hours Worked (Millions)		
	<u>1995</u>	<u>1996</u>	<u>% chg</u>	<u>1995</u>	<u>1996</u>	<u>% chg</u>
Private Sector	439.6	453.0	3.0	709.9	730.2	2.9
Agriculture/Forestry/Fishing	5.8	6.1	5.2	8.2	8.0	-2.4
Construction	21.7	23.0	6.0	40.0	42.2	5.5
Manufacturing	91.1	88.1	-3.3	177.5	171.1	-3.6
Transportation & Public Utilities	21.5	22.4	4.2	41.1	41.6	1.2
Wholesale	24.9	25.7	3.2	48.2	49.1	1.9
Retail	112.0	110.5	-1.3	160.5	164.4	2.4
Finance/Insurance/Real Estate	25.0	26.7	6.8	42.8	45.8	7.0
Services	137.3	150.4	9.5	189.7	207.5	9.4

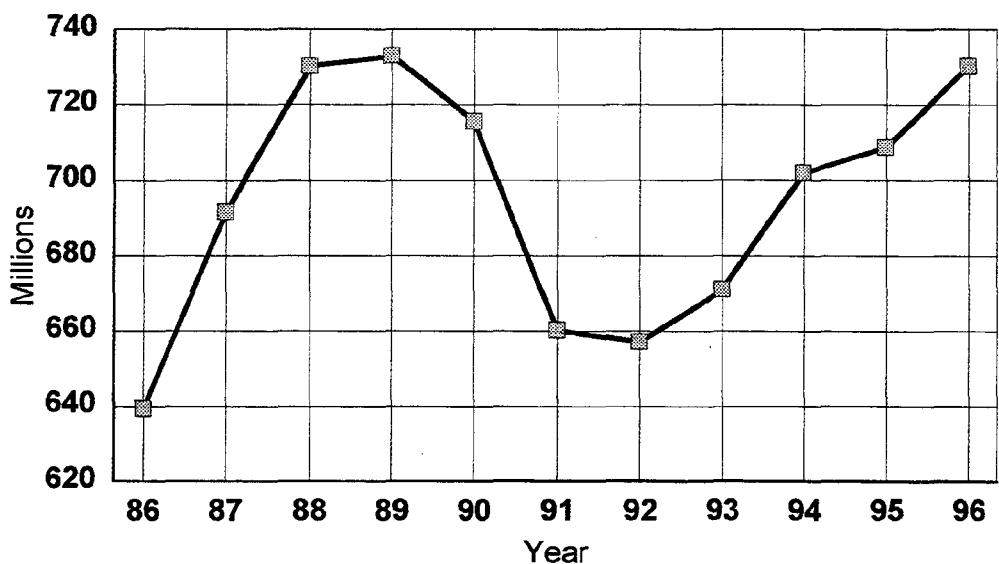

As shown in Figure 4 and 5, annual average employment and total hours worked in the private sector climbed to a new high in 1996. Employment increased from 439,583 workers in 1995 to 446,900 workers in 1996. The estimated total number of hours worked by private sector workers increased from 709.9 million hours in 1995 to 730.2 million hours worked in 1996 (See Figure 5).

**Figure 4. Annual Average Employment, Maine, 1986-1996**

Historically, the incidence rate of injuries and illnesses tends to increase as the numbers of work hours increase. The reason is that as employees work more hours, the exposure to various hazards in the workplace are extended, thus increasing the chance of injury or illness. However, beginning in 1993, this trend shifted. The work hours increased nearly 11% but the total case incidence rate decreased by 12%. This may be contributed to proactive stances of employers to prevent injuries and illnesses from occurring and to return to work programs practiced by employers and their insurance carrier. Under these programs, employees are removed from further exposure by the early detection of symptoms of an injury or illnesses.

**Figure 5. Total Hours Worked, Maine, 1986-1996**

Text Table H illustrates the relationship between the distribution of employment and the distribution of OSHA recordable cases in 1996 for each of the industry divisions. Manufacturing, by far, had the highest share of cases per employment. This industry employed 19.4 percent of the total private sector workforce but accounted for 37.4 percent of the total cases. On the other hand, Services had 33.2 percent of the employment but only 23.8 percent of the total recordable cases. These differences are due in large part to the varying risks in each industry.

**Text Table H: Distribution of Employment, Total Cases, Injuries and Illnesses by Industry Division, Maine, 1996**

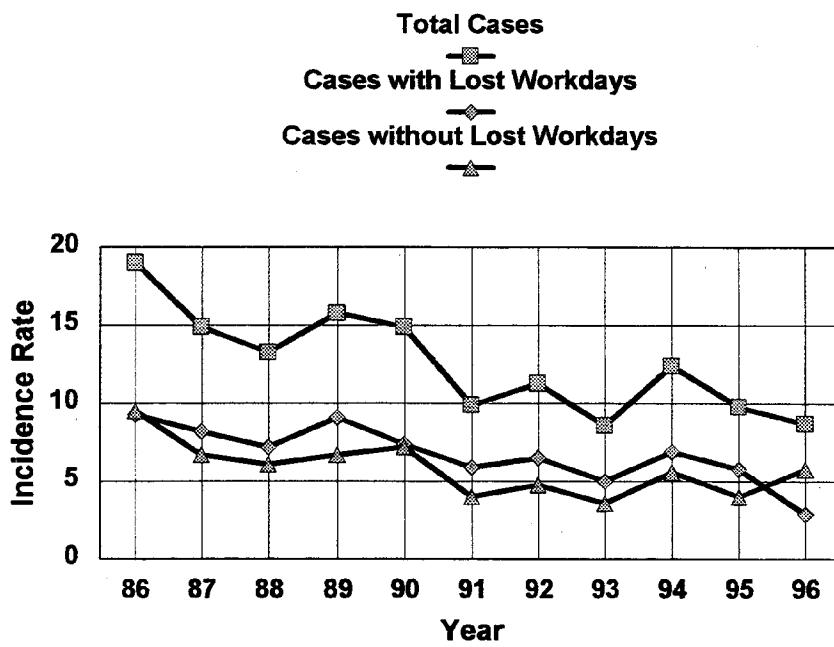

<u>Industry</u>	Percent Distribution			
	<u>Published Employment</u>	<u>Total Cases</u>	<u>Total Injuries</u>	<u>Total Illnesses</u>
Private Sector	100.0%	100.0%	100.0%	100.0%
Services	33.2	23.8	25.4	16.7
Retail	24.4	19.1	18.7	20.8
Manufacturing	19.4	37.4	35.3	46.2
Finance/Insurance/Real Estate	5.9	3.1	1.6	9.9
Wholesale	5.7	5.8	6.7	1.9
Construction	5.1	5.6	6.4	2.4
Transportation & Public Utilities	4.9	4.1	4.8	1.5
Agriculture/Forestry/Fishing	1.3	1.0	1.1	0.6

## Agriculture, Forestry & Fishing

The Agriculture, Forestry & Fishing industry includes establishments primarily engaged in agricultural production, forestry, commercial fishing, hunting, and trapping, and related services. This includes farms, ranches, dairies, greenhouses, orchards, and hatcheries. Note: Logging is not included in this industry (See manufacturing).

The total case incidence rate for Agriculture, Forestry & Fishing fell to 8.7 cases per 100 full-time workers in 1996. This is the second lowest rate recorded for this industry. In 1993, the incidence rate, the lowest rate recorded for this industry, was 8.6. The decline in the total case rate for this industry in 1996 was a result of the sharp drop in the incidence rate for cases resulting in lost workdays. The rate for these cases fell to a new low with 2.9 cases per 100 full-time workers. On the other hand, cases without lost workdays increased to 5.8 cases per 100 full-time workers.

**Figure 6. Agriculture, Forestry & Fishing, Maine, 1986 - 1996**

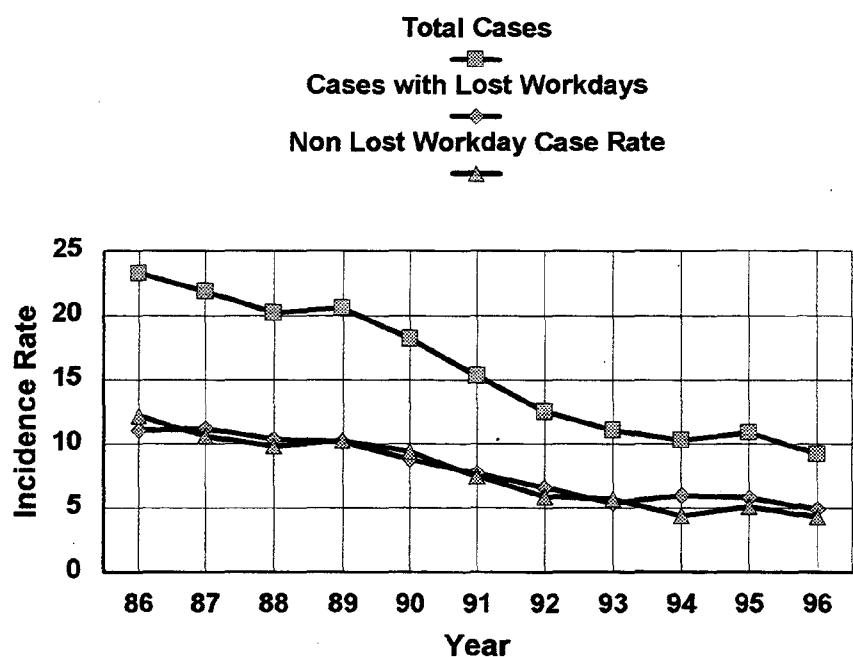

## Construction

The construction industry includes general building contractors, heavy construction contractors and special trades contractors. This includes residential and nonresidential builders; highway and street construction; and plumbing, heating, and electrical contractors.

Incidence rates for the construction industry have reached new lows. This industry recorded a total case incidence rate of 9.2 cases per 100 full-time workers in 1996. This is the first year that the total case incidence rate has fallen below 10.0. Since 1989, the total case incidence rate for construction decreased by more than 50%. The rate for cases resulting in lost time fell to a new low with 4.9 cases per 100 full-time workers. The rate for cases without lost time also fell to a new low with 4.3 cases per 100 full-time workers.

**Figure 7. Construction, Maine, 1986 - 1996**

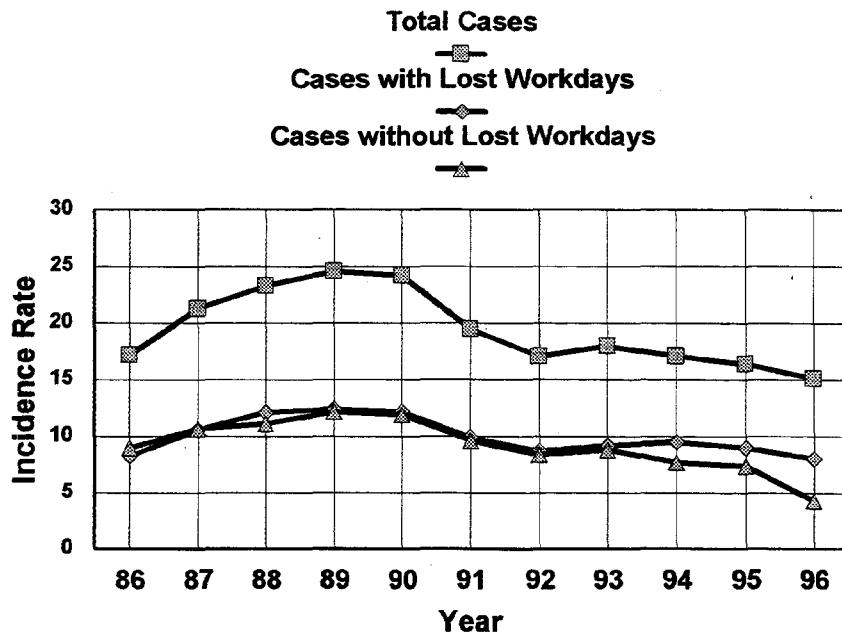

## Manufacturing

The manufacturing industry covers a wide range of businesses including, but not limited to food processing, tobacco products, textile mill products, apparel products, lumber and wood products, furniture and fixtures, paper products, printing and publishing, chemical products, petroleum production, rubber and plastic products, leather products, stone, clay and glass products, metal products, fabricated metal products, machinery and computer products, electronic equipment, transportation equipment, measuring and controlling instruments, and miscellaneous manufacturing products. As noted previously, logging operations are included here in manufacturing.

Manufacturing is Maine's most hazardous industry because of the significant amount of physical exertion and repetitive tasks. However, in recent years, it has shown a marked reduction in injury and illness incidence rates. In 1989 the total case incidence rate for manufacturing was 24.6 cases per 100 full-time workers. In 1996, this rate fell to 15.1, a decrease of nearly 39.0%. The total case incidence rate of 15.1, the lost workday case incidence rate of 8.0, and the non-lost workday case incidence of 7.0 were all record lows.

**Figure 8. Manufacturing, Maine, 1986 - 1996**

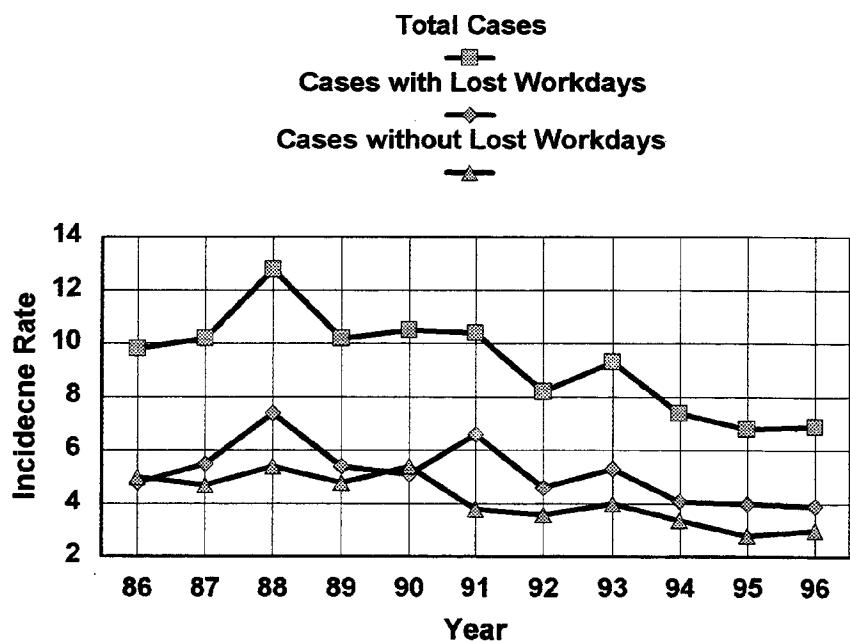

## Transportation & Public Utilities

Transportation & Public Utilities includes businesses providing passenger and freight transportation, communications services, electricity, gas, steam, water, or sanitary services.

Incidence rates for Transportation & Public Utilities leveled off in 1996 with a total case incidence rate of 6.9 cases per 100 full-time workers. The total case incidence rate for this industry has been cut nearly in half since the peak year of 1988 when a total case rate of 12.7 was recorded. The incidence rate for cases resulting in lost workdays in 1996 decreased to a new low of 3.9 cases per 100 full-time workers.

**Figure 9. Transportation & Public Utilities, Maine, 1986 - 1996**

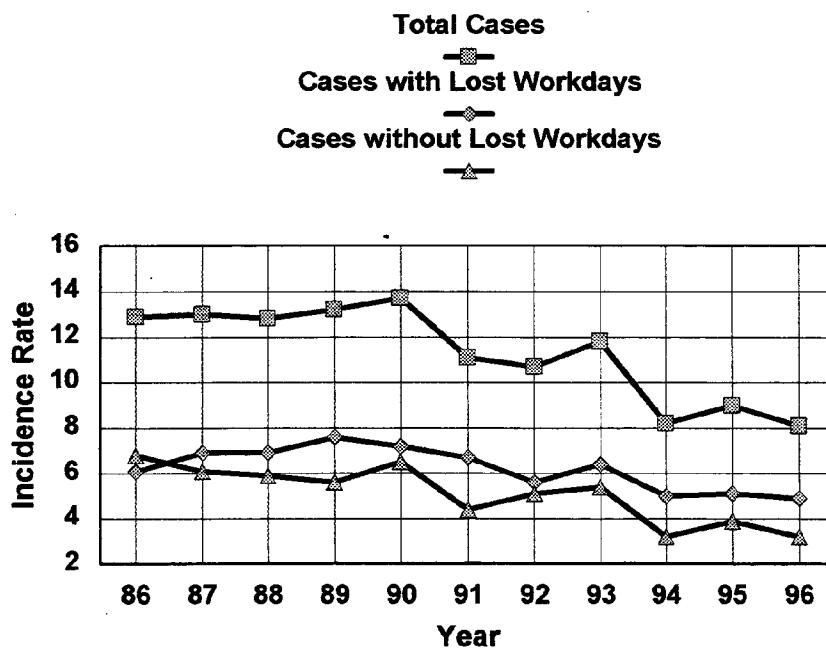

## Wholesale Trade

Wholesale Trade includes establishments primarily engaged in selling durable and non durable merchandise to retailers, industries, commercial businesses, institutional, farms, construction contractors, professional business users, or other wholesalers or agents.

Incidence rates for the wholesale industry decreased slightly to the levels of 1994. After an increase in 1995 (due to the increase in the rate for cases without lost time) this industry has once again fallen to new lows. The decline occurred as a result of the reduction in the less serious cases without lost workdays. The incidence rate for cases resulting in lost workdays remained steady in 1996.

**Figure 10. Wholesale Trade, Maine, 1986 - 1996**

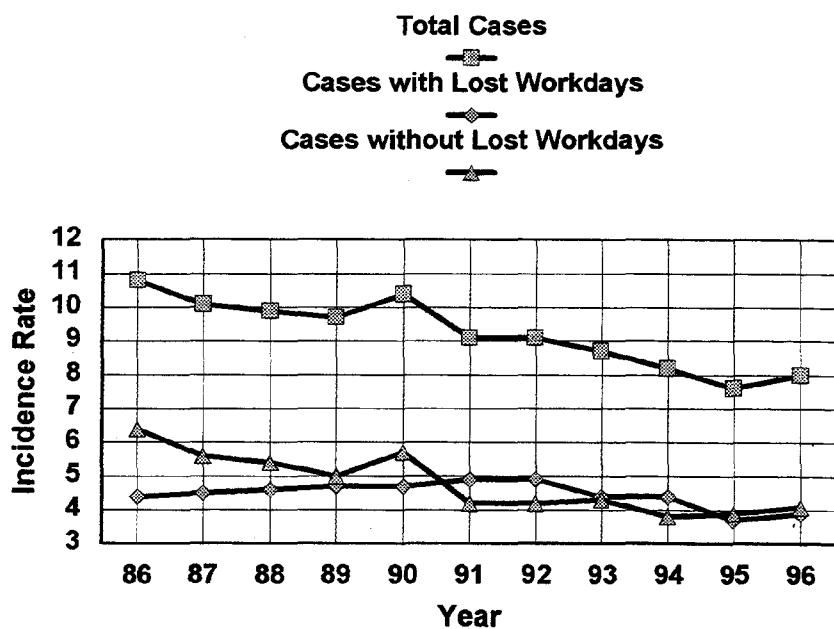

## Retail Trade

Retail Trade includes establishments engaged in selling merchandise for personal or household consumption and rendering services incidental to the sale of the goods.

Retail Trade was the only publishable industry to experience an increase in incidence rates for both cases resulting in lost time and cases resulting in no lost time. After five years of steady decline, the retail industry recorded a rate of 8.0 cases per 100 full-time workers, an increase of 5.3% over 1995. The rate for cases resulting in lost time was 3.9. The rate for cases without lost time was 4.1.

**Figure 11. Retail Trade, Maine, 1986 - 1996**

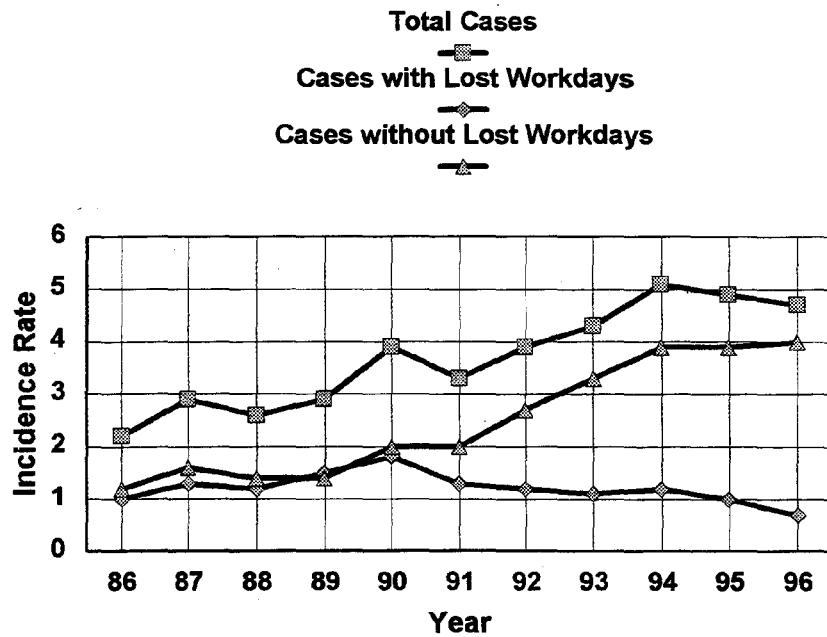

## Finance, Insurance & Real Estate

Finance, Insurance & Real Estate includes depository institutions, non depository credit institutions, holding companies, investment companies, brokers and dealers in securities and commodities. It also covers carriers of all types of insurance and insurance agents and brokers. The category also includes owners, lessors, lessees, buyers, sellers, agents, and developers of real estate.

The total case incidence rate for this industry decreased slightly in 1996 as compared with 1994. This industry was not publishable in 1995 due to reliability concerns. The total case incidence rate in 1996 was 4.7 cases per 100 full-time workers. The decrease in 1996 was due to a drop in cases resulting in lost workdays which fell to just 0.7 cases per 100 full-time workers. This industry had a much higher proportion of illnesses cases than the private sector as a whole with 40 percent. In comparison, the proportion of cases in the private sector as a whole that were illnesses was only 19 percent. Most of the illnesses were repetitive motion cases, which accounted for 60 percent of the total illnesses in this industry in 1996. This difference is due to the nature of the work involved in this industry which involves repetitive job tasks.

**Figure 12. Finance, Insurance & Real Estate, Maine, 1986 - 1996**

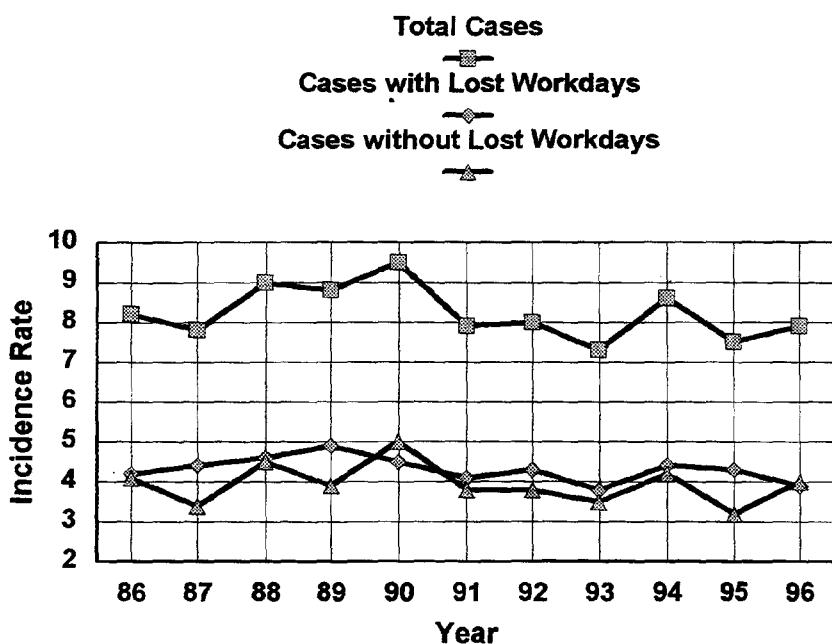

**Note:** The incidence rates for Finance, Insurance, and Real Estate were not reliable measures in 1995. Therefore, the line passing through 1995 is only a continuation line from 1994 to 1996.

## Services

Services include establishments primarily engaged in a wide variety of services for individuals, business and government establishments, and other organizations. It includes hotels and lodging places; establishments providing personal, business, repair, and amusement services; health, legal, engineering, and other professional services; educational institutions; membership organizations, and other miscellaneous services.

The Services industry has been one of the steadiest industries in Maine. The total case incidence rate has been near 8.0 cases per 100 full-time workers for many years. In 1996, the total case incidence rate for this industry was 7.9 cases per 100 full-time workers. Although the incidence rate for cases resulting in lost workdays decreased from 4.3 to 3.9, the incidence rate for cases without lost workdays increased from 3.2 to 4.0. This increase was due in large part to the healthcare industry where the rate for cases without lost workdays was 5.2 cases per 100 full-time workers, 30% higher than the average rate for the services industry as a whole.

**Figure 13. Services, Maine, 1986 - 1996**

## Major Industry Groups

In 1996, there were 44 Major Industry Groups (identified by two-digit SIC codes; see glossary) that were publishable. Of the 44 groups, 21 groups recorded lower total case incidence rates in 1996 than the previous year. Another 21 industries recorded higher incidence rates than the previous year. Two industries were not publishable in 1995 due to reliability concerns and were not compared.

Of the 44 Major Industry Groups, 13 two-digit industry groups exceeded the Private Sector total case incidence rate of 9.4 cases per 100 full-time workers (See Text Table I). The highest total case incidence rate occurred in Transportation Equipment (SIC 37) within Manufacturing. This group recorded a total case incidence rate of 34.7 cases per 100 full-time workers. Although 8.4% lower than 1995, this group remained in the highest position in 1996. Following Transportation Equipment was Food & Kindred Products and Leather and Leather Products with total case incidence rates of 19.6 and 16.7, respectively. Manufacturing groups, due to the inherent dangers in the workplace, held 8 of the 13 positions that exceeded the private sector incidence rate of 9.4 cases per 100 full-time workers. Construction and Retail Trade each held two spots while Services held one spot in the top 13 positions. Of note is the jump in rank for health services, which rose to the 9th position in 1996 from the 14th position. Also, two retail groups entered the list of those groups exceeding the industry average, Building Material and Hardware and General Merchandise Stores.

**Text Table I. Injury & Illness Incidence Rates for Industry Groups that Exceeded the Private Sector Incidence Rate, Maine, 1995 - 1996**

<u>Industry</u>	<u>SIC</u>	<u>Rank</u>		<u>Total Cases</u>		<u>Lost Workday Cases</u>	
		<u>1995</u>	<u>1996</u>	<u>1995</u>	<u>1996</u>	<u>1995</u>	<u>1996</u>

\*\* Represents industry group rates that did not exceed the private sector rate.

## Incidence Rates by Company Size

Incidence rates can vary depending on the size of a business. Generally, smaller businesses with between 1 to 10 employees have lower incidence rates than larger companies with 50 or more employees. The reason for these differences is beyond the scope of this publication. In 1996, total case incidence rates for the two largest size groups decreased (see Text Table J) while very small businesses experienced an increase.

---

**Text Table J. Total Case Incidence Rates by Size Class, Maine, 1995 - 1996**

<u>Number of Employees</u>	Incidence Rate		
	<u>1995</u>	<u>1996</u>	<u>% change</u>
All Sizes	9.7	9.4	-3.1
1 - 10	3.8	4.2	10.5
11 - 49	6.9	7.0	1.4
50 - 249	11.9	12.1	1.7
250 - 999	13.0	11.9	-8.5
1,000+	17.3	16.1	-6.9

---

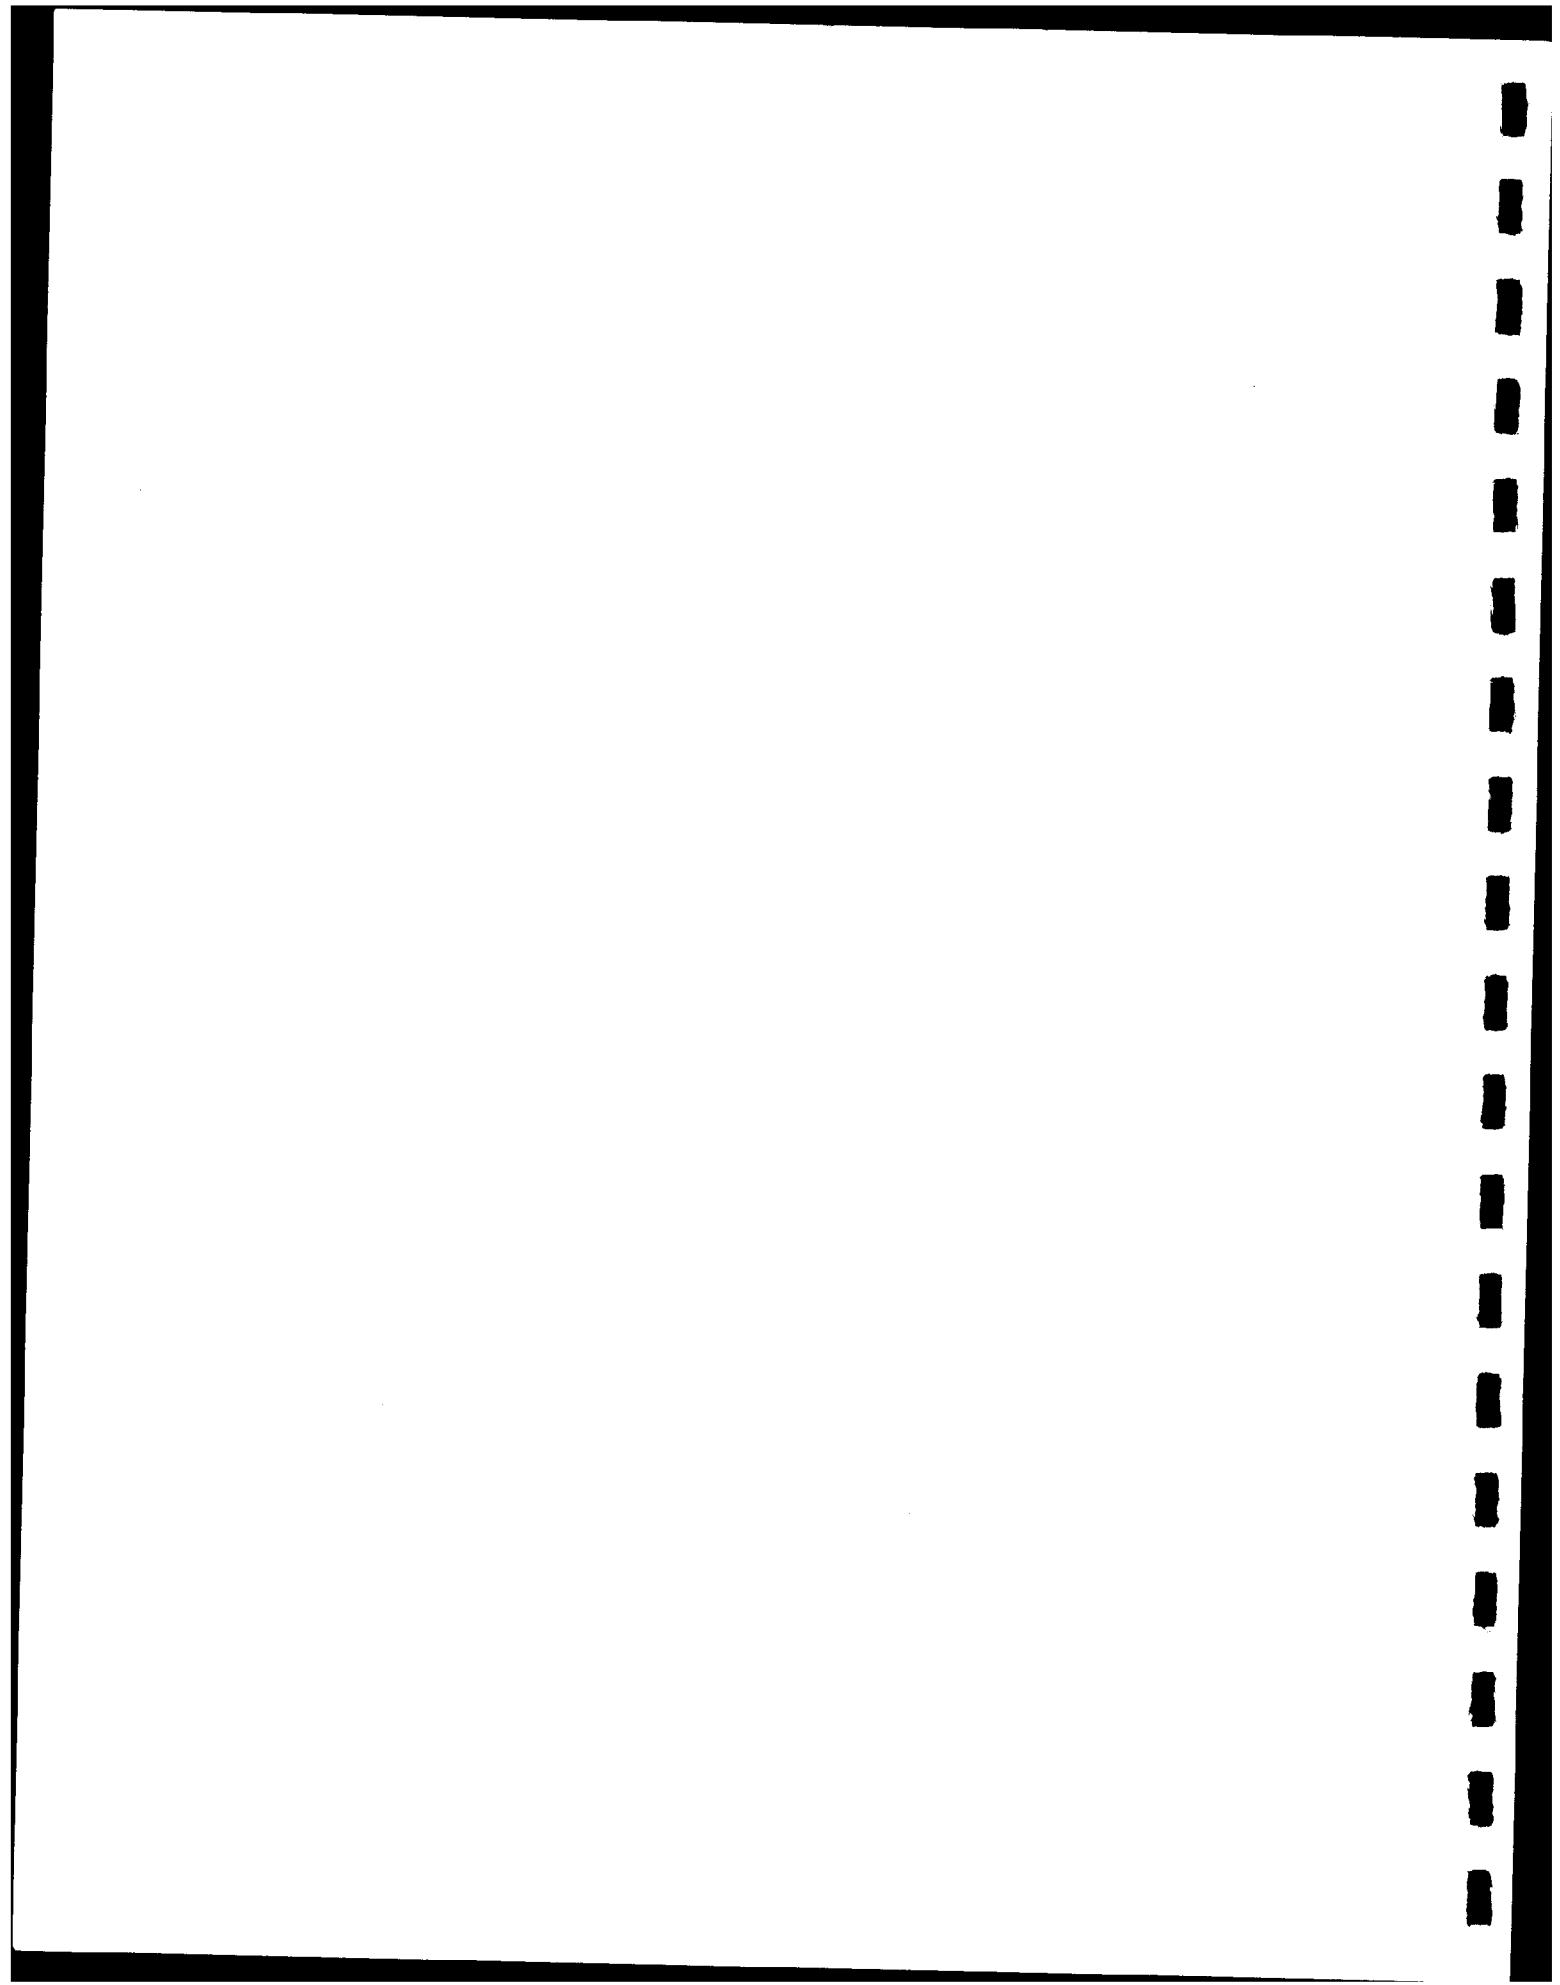

## Maine vs. United States

By adjusting the incidence rates to account for the differences in the makeup of the industries between Maine and the U.S., the two rates can be compared fairly.

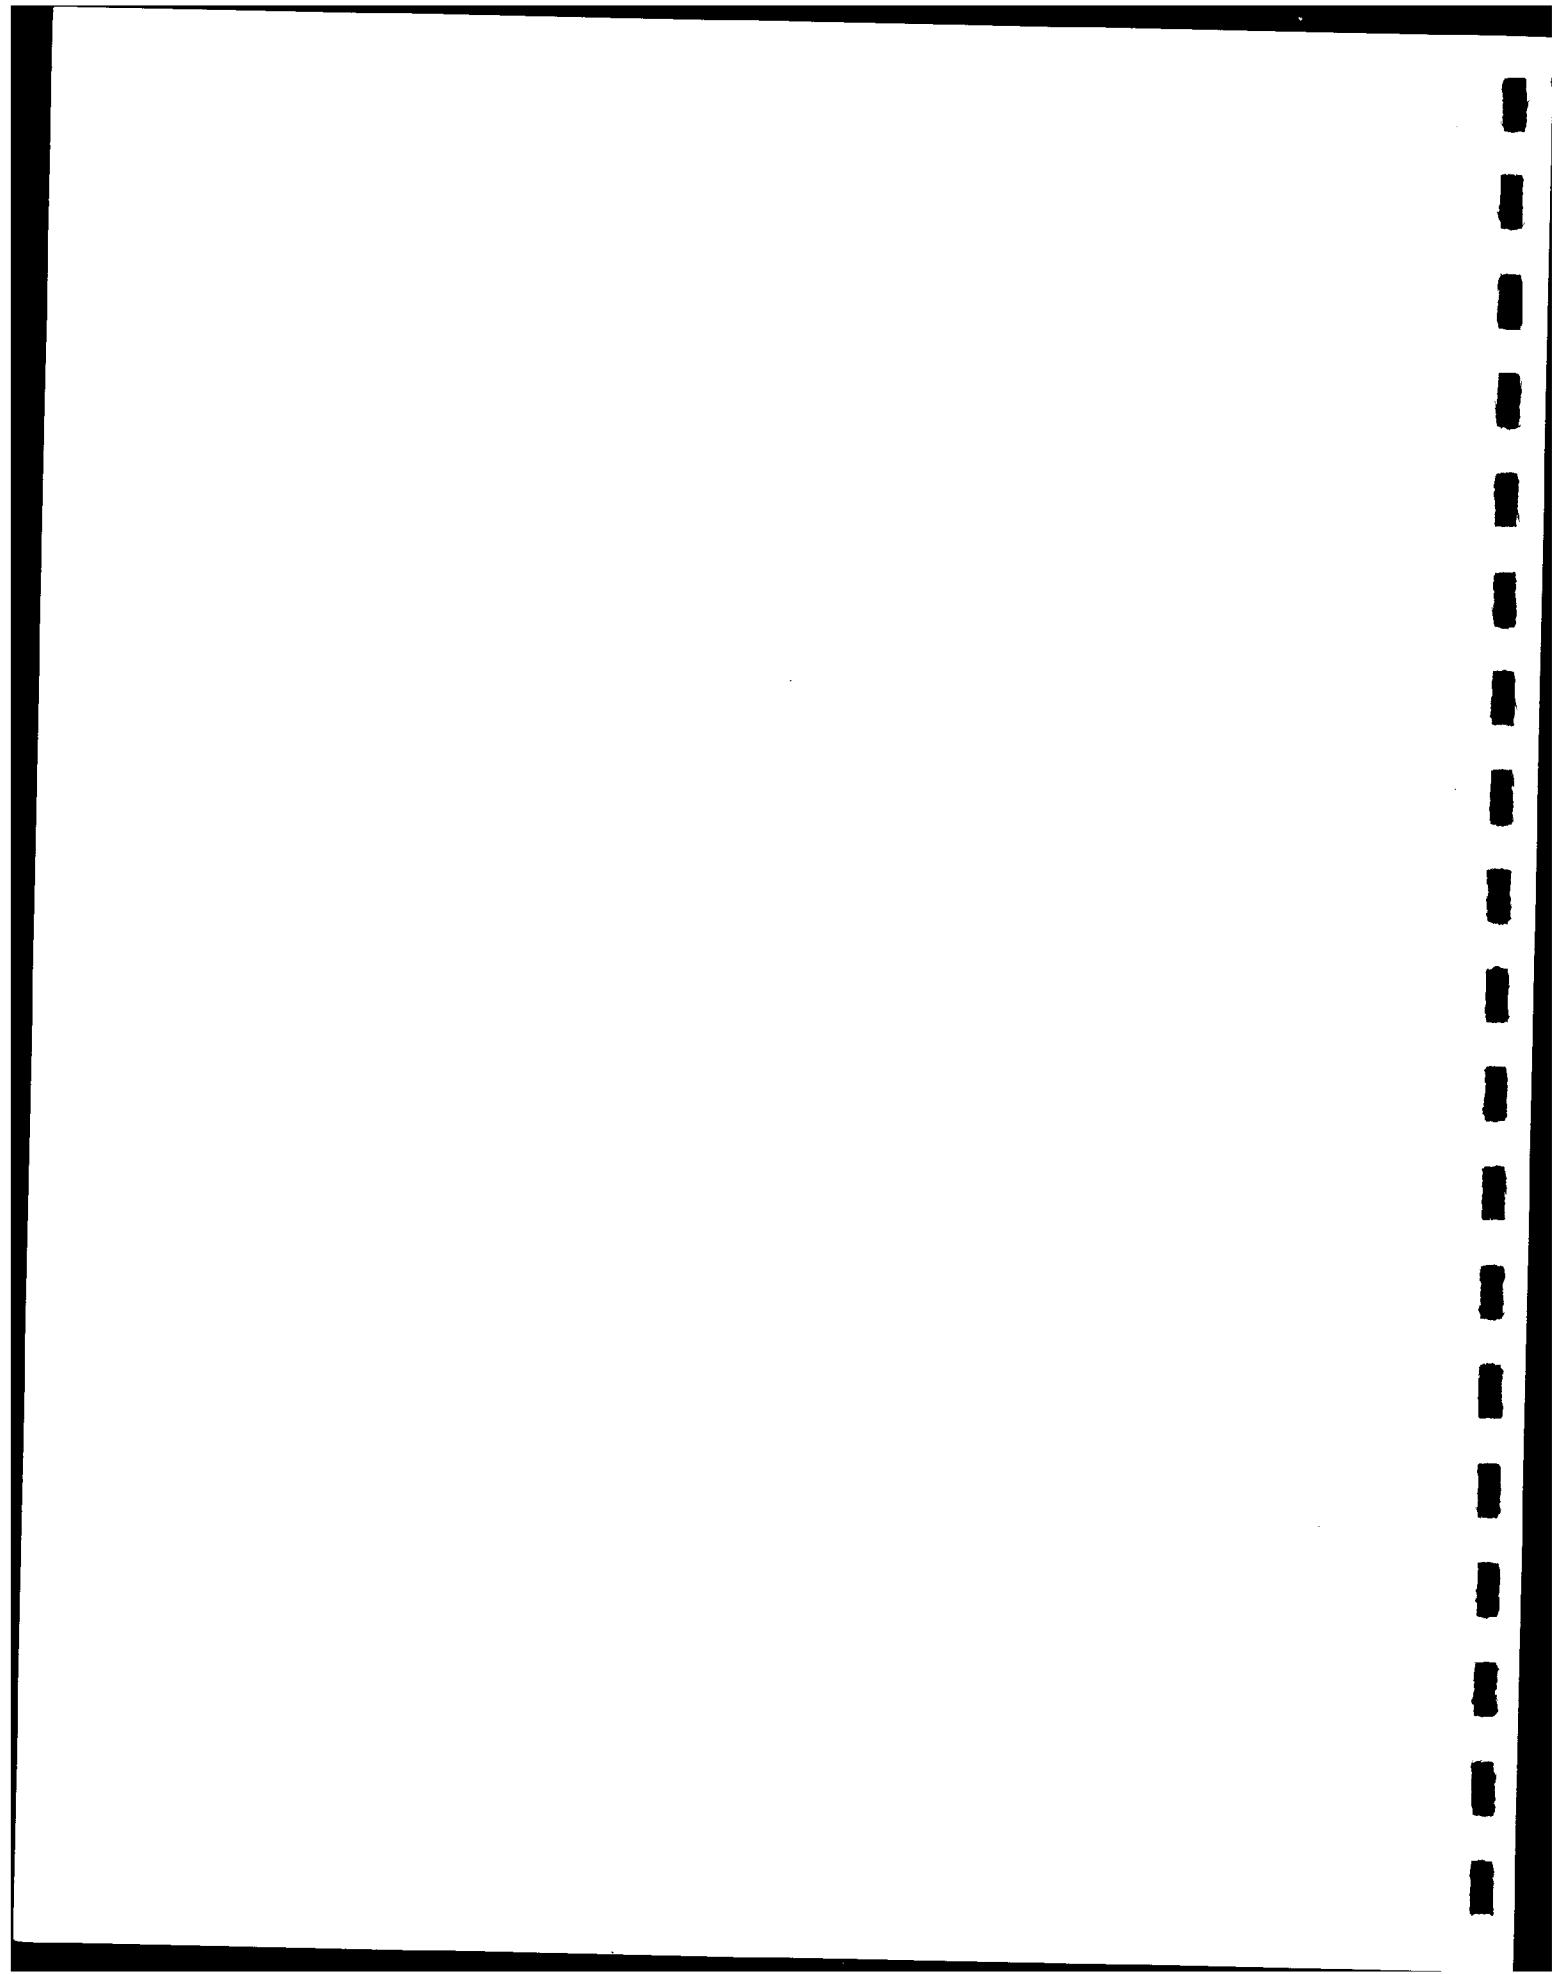

In 1996, the total case incidence rate (adjusted for the mix of industries in the U.S.) in Maine was 21.6% higher than the U.S. as a whole (See Text Table K.). The adjusted total case incidence rate for Maine's private sector was 9.0 cases per 100 full-time workers in 1996. The comparable total case incidence rate for the U.S., as a whole, was 7.4 cases per 100 full-time workers, a difference of 21.6 percent.

**Text Table K. Incidence Rates (Maine & U.S.) by Case Type, 1972 - 1996**

Year	Total Cases			Lost Workday Cases		
	Maine Unadjusted Incidence	Maine Adjusted Incidence	U.S. Incidence	Maine Unadjusted Incidence	Maine Adjusted Incidence	U.S. Incidence

## **Public Sector Results**

## 1996 Occupational Safety & Health Survey Summary

### Public Sector

- Maine's public sector (state, county & local government) total case incidence rate was 5.9 cases per 100 full-time workers in 1996. This equals the record low incidence rate for 1995.
- **Injury and illness incidence rates:**

	<u>1995</u>	<u>1996</u>
Total cases	5.9	5.9
Lost workday cases	3.0	3.2
Cases with days away from work	2.6	2.4
Cases with restricted work activity	0.4	0.8
Cases without lost workdays	2.9	2.7
- **Number of OSHA recordable cases:**

Injuries and illnesses	3,418	3,628
Injuries	3,040	2,881
Illnesses	378	747
- **Injury and illness case types:**

Total cases	3,418	3,628
Cases with lost workdays	1,744	1,942
Cases with days away from work	1,503	1,456
Case with restricted work activity	240	487
Cases without lost workdays	1,674	1,685
- **Illness case types:**

Total Illnesses	378	747
Repeated Trauma	234	548
Respiratory Conditions	23	92
Other	51	63
Skin Diseases/Disorders	19	35
Physical Agents	46	4
Dust Diseases of the Lungs	0	3
Poisoning	4	2

## Injuries & Illnesses

Under the Maine Occupational Safety and Health Act, 26 MRSA Section 565, as amended by P.L. 1989, Ch 712, all work-related illnesses in public places of employment must be recorded. Injuries are recorded if they require medical treatment beyond first aid or the injury involves lost time beyond the day of injury, loss of consciousness, restriction of work or motion, or transfer to other work.

---

**Text Table L. Injury and Illness Cases by Case Type, Public Sector,  
Maine, 1992 - 1996**

<u>Survey Year</u>	<u>Total Cases</u>	<u>Cases with Lost Workdays</u>	<u>Cases with Days Away From Work</u>	<u>Cases with Restricted Workdays</u>	<u>Cases without Lost Workdays</u>
1992	3,830	1,908	1,686	222	1,922
1993	3,511	1,740	1,532	208	1,771
1994	4,144	2,227	1,912	315	1,917
1995	3,418	1,744	1,503	240	1,674
1996	3,628	1,942	1,456	487	1,685

---

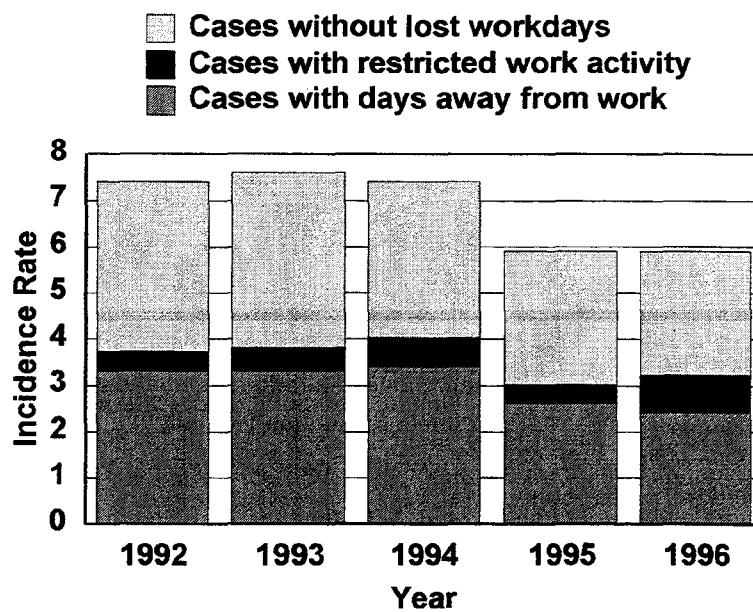

## Injury and Illness Rates

OSHA recordable occupational injuries and illnesses in Maine's public sector, as a whole, occurred at a rate of 5.9 cases per 100 full-time workers in 1996, unchanged from the previous year. The rate of injuries and illnesses for each form of government, state and local, remained steady.

State government experienced a total case incidence rate of 3.7 cases per 100 full-time workers in 1996 after a rate of 3.8 the previous year. Local government experienced a rate of 7.0 cases per 100 full-time workers after recording a rate of 6.8 the previous year.

Although the total case incidence rate remained steady there was a shift in the severity of the cases within state and local government. Figure 15 shows that the rate for the cases considered more serious, those with days away from work, decreased while the rate for cases resulting in restricted work activity increased. Together, these two severity types comprise case with lost workdays. This result was also evident in the private sector.

**Figure 14. Injury and Illness Rates by Case Type, Public Sector,  
Maine, 1992 - 1996**

**Text Table M. Injury and Illness Rates by Case Type, Public Sector,  
Maine, 1992 - 1996**

Survey Year	Total Cases	Incidence Rates			
		Cases with Lost Workdays	Cases with Days Away From Work	Cases with Restricted Workdays	Cases without Lost Workdays
1992	7.4	3.7	3.3	0.4	3.7
1993	7.6	3.8	3.3	0.5	3.8
1994	7.3	3.9	3.4	0.6	3.4
1995	5.9	3.0	2.6	0.4	2.9
1996	5.9	3.2	2.4	0.8	2.7

## **Injury Rates**

State and local government in Maine recorded 4.7 occupational injuries per 100 full-time workers in 1996, a decrease of 11.3% from 1995. (See Text Table N.)

The lost workday injury incidence rate due to injuries was 2.8 cases per 100 full-time workers in 1996, unchanged from 1995.

Injuries accounted for 79.4% of all cases occurring in the public sector in 1996.

---

**Text Table N. Injury Incidence Rates by Case Type, Public Sector,  
Maine, 1992 - 1996**

<b>Survey Year</b>	<b>Total <u>Injuries</u></b>	<b>Incidence Rates</b>			
		<b>Injuries with Lost <u>Workdays</u></b>	<b>Injuries with Days Away <u>From Work</u></b>	<b>Injuries with Restricted <u>Workdays</u></b>	<b>Injuries without <u>Lost Workdays</u></b>
1992	6.7	3.4	3.0	0.4	3.2

1994	6.4	3.5	3.1	0.5	2.9
1995	5.3	2.8	2.4	0.4	2.5
1996	4.7	2.8	2.1	0.7	1.9

---

## Illness Rates

State and local government in Maine experienced an incidence rate for work-related illnesses of 1.2 cases per 100 full-time workers in 1996, a 100.0% increase over 1995. (See Text Table O.)

The lost workday case incidence rate was 0.4 cases per 100 full-time workers, double the rate recorded in 1995.

Illnesses accounted for 20.6% of all cases occurring in state and local government workplaces, up from 11.8% in 1995.

---

**Text Table O. Illness Incidence Rates by Case Type, Public Sector,  
Maine, 1992 - 1996**

Survey <u>Year</u>	Total <u>Illnesses</u>	Incidence Rates

---

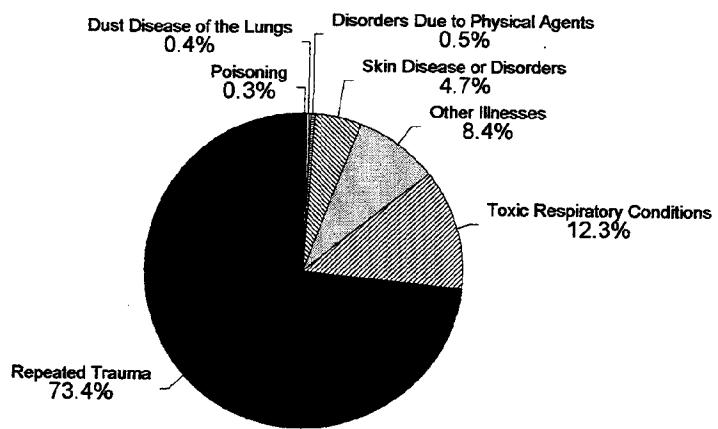

Text Table P shows the number of occupational illnesses categorized by the type of illness. Work-related illnesses are recorded in seven categories. (See Appendix F: Glossary for a description of the seven categories.)

**Text Table P. Number of Occupational Illnesses by Type, Public Sector, Maine, 1996**

<u>Type of Illness</u>	Number of Illnesses		
	<u>Total</u>	<u>State</u>	<u>Local</u>
Total All Types	747	191	556
Skin Diseases or Disorders	35	11	24
Dust Diseases of the Lungs	3	3	0
Respiratory Conditions Due to Toxic Agents	92	3	89
Poisoning	2	2	0
Disorders Due to Physical Agents	4	4	0
Disorders Due to Repeated Trauma	548	154	394
Other Illnesses	63	14	49

Disorders associated with repeated trauma, which includes cases involving tendonitis, carpal tunnel syndrome, and hearing loss due to prolonged exposure, accounted for 73.4% of all work-related illnesses in state and local government in 1996, up from 61.9% in 1995.

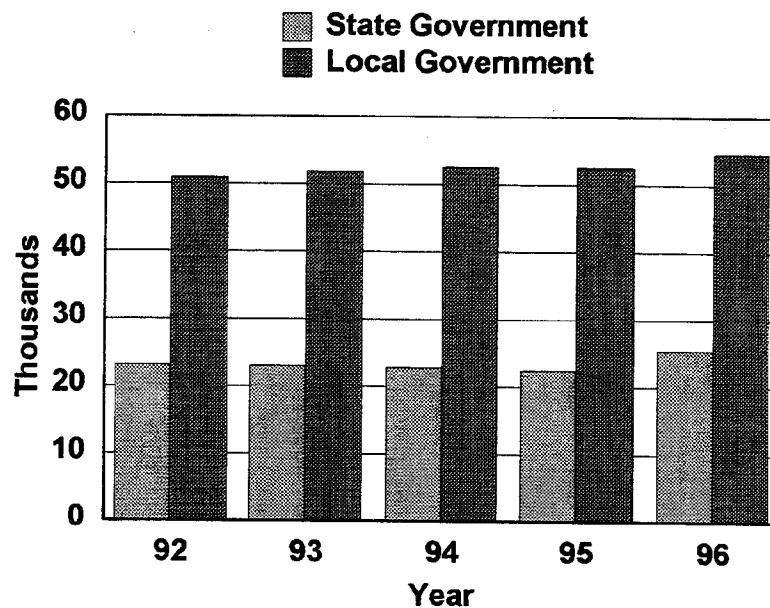

**Figure 15. Distribution of Illnesses by Type, Public Sector, Maine, 1996**

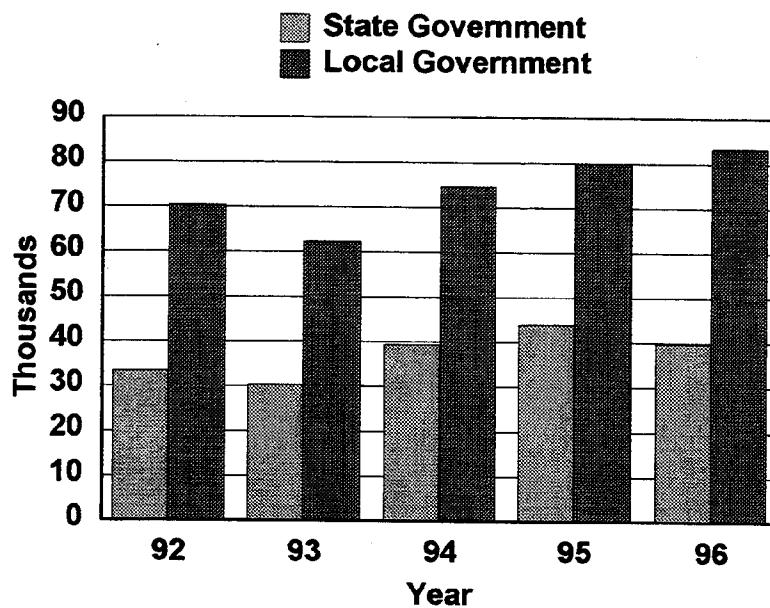

## Employment and Hours Worked

Annual average employment and total hours worked increased in both state and local government. State government gained 2,983 employees after three years of decline. The steady decrease was due mainly to budget cuts which resulted in layoffs to state workers. Local government increased steadily since 1992 reaching 54,600 employees in 1996.

**Figure 16. Annual Average Employment, Public Sector, Maine, 1992 - 1996**

**Figure 17. Total Hours Worked, Public Sector, Maine, 1992 - 1996**

## **Major Industry Groups**

Major Industry Groups are defined using the Standard Industrial Classification (SIC) system (See Appendix F: Glossary). Data is provided for nine industry groups in State Government and seven industry groups in Local Government.

### **State Government**

Construction  
Educational Services  
Social Services  
Public Administration  
Executive & Legislative Bodies  
Justice, Public Order & Safety  
Administration of Human Resources  
Environmental Quality & Housing  
Administration of Economic Programs

### **Local Government**

Construction  
Transportation & Public Utilities  
Electric, Gas & Sanitary Services  
Finance, Insurance & Real Estate  
Amusement & Recreational Services  
Educational Services  
Executive & Legislative Bodies  
Justice, Public Order & Safety

### OSHA 101 SUPPLEMENTAL RECORD

Bureau of Labor Statistics  
Supplementary Record of  
Occupational Injuries and Illnesses

U.S. Department of Labor

This form is required by Public Law 91-596 and must be kept in the establishment for 5 years. Failure to maintain can result in the issuance of citations and assessment of penalties.		Case or File No.	Form Approved O.M.B. No. 1220-0029
Employer		See OMB Disclosure Statement on reverse	
1. Name			
2. Mail address (No. and street, city or town, State, and zip code)			
3. Location, if different from mail address			
Injured or Ill Employee			
4. Name (First, middle, and last)		Social Security No.	
5. Home address (No. and street, city or town, State, and zip code)			
6. Age		7. Sex: (Check one) Male <input type="checkbox"/> Female <input type="checkbox"/>	
8. Occupation (Enter regular job title, not the specific activity he was performing at time of injury.)			
9. Department (Enter name of department or division in which the injured person is regularly employed, even though he may have been temporarily working in another department at the time of injury.)			
The Accident or Exposure to Occupational Illness			
If accident or exposure occurred on employer's premises, give address of plant or establishment in which it occurred. Do not indicate department or division within the plant or establishment. If accident occurred outside employer's premises at an identifiable address, give that address. If it occurred on a public highway or at any other place which cannot be identified by number and street, please provide place references locating the place of injury as accurately as possible.			
10. Place of accident or exposure (No. and street, city or town, State, and zip code)			
11. Was place of accident or exposure on employer's premises? Yes <input type="checkbox"/> No <input type="checkbox"/>			
12. What was the employee doing when injured? (Be specific. If he was using tools or equipment or handling material, name them and tell what he was doing with them.)			
13. How did the accident occur? (Describe fully the events which resulted in the injury or occupational illness. Tell what happened and how it happened. Name any objects or substances involved and tell how they were involved. Give full details on all factors which led or contributed to the accident. Use separate sheet for additional space.)			
_____ _____			
Occupational Injury or Occupational Illness			
14. Describe the injury or illness in detail and indicate the part of body affected. (E.g., amputation of right index finger at second joint; fracture of ribs; lead poisoning; dermatitis of left hand, etc.)			
15. Name the object or substance which directly injured the employee. (For example, the machine or thing he struck against or which struck him; the vapor or poison he inhaled or swallowed; the chemical or radiation which irritated his skin; or in cases of strains, hernias, etc., the thing he was lifting, pulling, etc.)			
16. Date of injury or initial diagnosis of occupational illness		17. Did employee die? (Check one) Yes <input type="checkbox"/> No <input type="checkbox"/>	
Other			
18. Name and address of physician			
19. If hospitalized, name and address of hospital			
Date of report	Prepared by	Official position	

OSHA No. 101 (Feb. 1981)

## **SURVEY OF OCCUPATIONAL INJURIES & ILLNESSES, 1996**

## **Survey of Occupational Injuries and Illnesses, 1996**

U.S. Department of Labor  
Bureau of Labor Statistics

©2007 Company Address

N

After the survey (ranging from 30 minutes to 4 hours per package), the interviewer will discuss and complete the collection of data, and then mail the survey to: Bureau of Labor Statistics, Division of Management and Budget, Paperwork Reduction Committee, Washington, D.C. 20532. **DO NOT MAIL TO EITHER OF THESE OFFICES.**

The information collected in this survey will be held confidential and used for statistical purposes only.

OMB No. 1220-0045  
Approval expires 09-30-97  
BLS-9300 N06

## Appendix C (continued)

### SURVEY OF OCCUPATIONAL INJURIES & ILLNESSES, 1996

#### Part 1: Summary of 1996 Occupational Injuries and Illnesses

All establishments must complete this part of the survey, even if there were no occupational injuries and illnesses during 1996. This form tells us about the number of employees in your establishment and the number of hours they worked. It also gives us a summary of any occupational injuries and illnesses that did occur during 1996.

If you have already provided the Occupational Safety and Health Administration (OSHA) with this information, you may attach a copy of their form instead of completing Part 1. If you choose to attach the OSHA form, go to *What's Next*.

To answer the questions below, you'll need

- information about employment and hours worked from your payroll, and
- your completed copy of the 1996 *Log and Summary of Occupational Injuries and Illnesses* (OSHA No. 200).

#### Tell us about your establishment's employees and the hours they worked

Be sure the information you supply refers only to the establishment(s) noted on the cover under *Reporting Site*.

1. What is the average number of employees who worked for your establishment during 1996?  
If this number isn't available, you can estimate it this way:

*Employment average*

- Add together the number of employees your establishment paid in every pay period during 1996. Include all employees: full-time, part-time, temporary, seasonal, salaried, and hourly.
- Divide that answer by the number of pay periods your establishment had in 1996. Be sure to include any pay periods when you had no employees.
- Round the answer to the next highest whole number. Write the rounded number in the blank marked *Employment average*.

##### Example

Acme Construction pays its employees 26 times each year. During 1996,

in this pay period	Acme paid this many employees
1	10
2	0
3	15
4	30
5	40
↓	↓
24	20
25	15
26	10

830 (sum)

Because Acme has 26 pay periods, it would divide its sum by 26.

$$830 \text{ divided by } 26 = 31.92$$

Acme would round 31.92 to 32 and write that number in the blank marked *Employment average*.

2. How many hours did your employees (salaried as well as hourly employees) actually work during 1996?

*Total hours worked*

Do not include vacation, sick leave, holidays, or any other non-work time, even if employees were paid for it. If your establishment keeps records of only the hours paid or if you have employees who are not paid by the hour, please estimate the hours that the employees actually worked.

If this number isn't available, you can use this worksheet to estimate it.

##### Optional Worksheet

Find the number of full-time employees in your establishment for 1996.

\_\_\_\_\_  $\times$  \_\_\_\_\_ Multiply by the number of work hours for a full-time employee in a year.

\_\_\_\_\_ This is the number of full-time hours worked.

\_\_\_\_\_  $+$  \_\_\_\_\_ Add the number of any overtime hours as well as the hours worked by other employees (part-time, temporary, seasonal).

\_\_\_\_\_ Round the answer to the next highest whole number. Write the rounded number in the blank marked *Total hours worked*.

## Appendix C (continued)

### SURVEY OF OCCUPATIONAL INJURIES & ILLNESSES, 1996

3. Put an X in the box next to all the conditions that might have affected your answers to #1 and #2.

Nothing unusual happened       Natural disaster or adverse weather conditions  
 Strike or lockout       Shorter work schedules or fewer pay periods than usual  
 Shutdown or layoff       Longer work schedules or more pay periods than usual  
 Seasonal work       Other reason: \_\_\_\_\_

4. Did you have ANY occupational injuries or illnesses during 1996?

Yes. Go to the next section, *Tell us about the injuries and illnesses during 1996*.  
 No. Go to *Sign This Form* on the back cover.

#### Tell us about the injuries and illnesses during 1996

If you had occupational injuries or illnesses during 1996, follow these steps.

- ① Go to your completed 1996 *Log and Summary of Occupational Injuries and Illnesses* (OSHA No. 200) form.
- ② Look at the total line on the last page.
- ③ Copy the 1996 totals from your OSHA No. 200 form into the columns below. If more than one establishment is noted on the front cover under *Reporting Site*, add together the total lines from all your OSHA No. 200 forms to get the 1996 totals for all establishments. Then copy those totals into the columns below.

#### Total Injuries

Copy these totals from columns (1) – (6):

Deaths as a result of injury (column 1)	Injuries with days away from work, or restricted workdays or both (column 2)	Injuries with days away from work (column 3)	Total days away from work (column 4)	Total days of restricted work activity (column 5)	Injuries without lost workdays (column 6)
_____	_____	_____	_____	_____	_____

#### Total Types of Illnesses

Copy these totals from columns (7a) – (7g):

Skin diseases or disorders (column 7a)	Dust diseases of the lungs (column 7b)	Respiratory conditions due to toxic agents (column 7c)	Poisoning (column 7d)	Disorders due to physical agents (column 7e)	Disorders associated with repeated traumas (column 7f)	Other occupational illnesses (column 7g)
_____	_____	_____	_____	_____	_____	_____

#### Total Illnesses

Copy these totals from columns (8) – (13):

Deaths as a result of illness (column 8)	Illnesses with days away from work, or restricted workdays or both (column 9)	Illnesses with days away from work (column 10)	Total days away from work (column 11)	Total days of restricted work activity (column 12)	Illnesses without lost workdays (column 13)
_____	_____	_____	_____	_____	_____

#### What's next

Look at the totals you copied into columns (3) and (10) above (look for the bold lines).

- If you had NO cases in both columns (3) and (10), you are finished with the survey. Go to *Sign This Form* on the back cover.
- If you HAD cases in either column (3) or column (10), go to *Part 2: Reporting Cases with Days Away from Work*.

## Appendix C (continued)

### SURVEY OF OCCUPATIONAL INJURIES & ILLNESSES, 1996

#### Case with Days Away from Work

Tell us about a 1996 occupational injury or illness only if it resulted in days away from work. To find out which cases you should report, read the instructions at the beginning of *Part 2: Reporting Cases with Days Away from Work*. We will keep all information that you give us confidential.

#### Tell us about the case

Go to your completed OSHA No. 200 form. Copy the case information from that form into the columns below.

Date of injury or illness (column B)	Employee's last name, first initial (column C)	Injury	Days away from work (column 4)	Days of restricted work activity (column 5)	Illness	Days away from work (column 11)	Days of restricted work activity (column 12)
1 / 96 month day year							

If, as a result of the injury or illness, the employee did NOT return to work in any capacity in 1996, tell us why.

Still recovering; approximate return date 1 / 1997  
month day year

Other, *examples:* retired, resigned, permanently (total) disabled: \_\_\_\_\_

#### Tell us about the employee

Please answer the questions below.

- Employee's approximate length of service at this establishment when the incident occurred (optional)  
 Less than 3 months  
 From 3 to 11 months  
 From 1 to 5 years  
 More than 5 years

- Employee's race or ethnic background (optional)

White, not of Hispanic origin  
 Black, not of Hispanic origin  
 Hispanic  
 Asian or Pacific Islander  
 American Indian, Aleut, or Eskimo

You may either answer the next questions or attach a copy of a supplementary document that answers them.

3. Employee's age \_\_\_\_\_ OR date of birth 1 / 1  
month day year

4. Employee's sex

Male  
 Female

5. Employee's occupation \_\_\_\_\_  
Be specific and describe the occupation. Do not use a general term such as "maintenance". *Examples:* "auto mechanic", "janitor."

#### Tell us about the incident

Answer the questions below or attach a copy of a supplementary document that answers them.

- What was the employee doing just before the incident occurred?  
Tell us about the activity as well as the tools, equipment, or material the employee was using. Be specific. *Examples:* "climbing a ladder while carrying roofing materials"; "spraying chlorine from hand sprayer"; "daily computer key-entry."

- What happened? Tell us how the injury or illness occurred.  
*Examples:* "When ladder slipped on wet floor, worker fell 20 feet"; "Worker was sprayed with chlorine when gasket broke during replacement"; "Worker developed soreness in wrist over time."

- What was the injury or illness? Tell us the part of the body that was affected and how it was affected; be more specific than "hurt," "pain," or "sore." *Examples:* "strained back"; "chemical burn, hand"; "tendinitis, elbow"; "carpal tunnel syndrome."

- What object or substance directly harmed the employee?  
*Examples:* "concrete floor"; "chlorine"; "radial arm saw." If this question does not apply to the incident, leave it blank.

## Appendix D

### Technical Notes

#### Design

Sampling theory is used in the OSH Survey to analyze statistical information on the incidence of work-related injuries and illnesses. The survey categorizes establishments by Standard Industrial Classification code (SIC) and employment size and then subsamples these groups for inclusion in the survey. Selection for participation in the survey is random. These samples provide a cost effective method of selecting a sufficient number of sampling units to obtain, at lowest possible cost, statistical estimates of work-related injuries and illnesses.

Although response is mandatory for those employers who are chosen, the results can be affected by errors. These errors are due to nonresponses by employers and sampling errors (e.g. a unit found to be outside the scope of the survey). Randomization increases the accuracy of the survey estimation by distributing it evenly throughout the sample. These samples represent the population of employers in Maine in which estimates of work-related injuries and illnesses are produced.

#### Process

For the state of Maine, a sample of about 2,500 private sector employers and about 500 public sector employers are chosen to participate in the survey. **Note:** Due to federal government budget cuts, the survey sample for 1996 was reduced by nearly 50%. The samples are refined to ensure correct addresses and to eliminate duplicates and employers known to be out of business.

Survey booklets are mailed to the selected sample of employers. Employers must provide the company's average employment, total hours worked, and the total number of OSHA recordable injury and illness cases for the calendar year. Employers must also provide detailed information on the more serious cases that resulted in days away from work. (The total number of OSHA recordable injuries and illnesses are taken from the OSHA 200 Log which most employers must maintain annually). When the survey booklets are returned to the Department of Labor, they are reviewed for consistency and correctness. If necessary, the employer is recontacted to clarify any discrepancies.

Once the collection of the data is complete, estimates of injuries and illnesses are generated for three categories: total cases (injuries and illnesses combined), injuries only, and illnesses only. These categories are then broken down by days away from work, restricted work activity, and non-lost time cases. These statistics are produced for each publishable industry classification.

Before the resulting estimates are made public, they must comply to a minimum set of publishability rules set forth by the Bureau of Labor Statistics. These rules are to ensure that individual establishment data remains confidential.

## Appendix D (continued)

### OSHA Recordkeeping System

The OSH Act of 1970 and the Maine Safety and Health Act, 26 MRSA Section 565, as amended by P.L. 1989, Ch. 712, requires covered employers to prepare and maintain records of work-related injuries and illnesses. The recordkeeping regulations in Part 1904 of the Title 29 of the Code of Federal Regulations (29 CFR 1904) provide specific recording and reporting requirements which make up the OSHA recordkeeping system.

The basic requirements are as follows:

1. The OSHA 200 Log and the OSHA 101 Supplemental Record are the instruments used for recording and classifying work-related injuries and illnesses and for noting the outcome of each case (e.g. whether the case was a fatality, a nonfatal case with lost workdays, or a nonfatal case without lost workdays).
2. Injury and illness records must be kept at business establishments. If an employer has more than one establishment or distinctly separate activities, a set of records must be maintained for each.

Note: It is possible to prepare and maintain the log at a location other than the establishment or by means of computer storage provided that certain requirements are met. This exception applies only to the OSHA Log.

3. In addition to maintaining the OSHA Log and the Supplemental Record on a calendar year basis, employers are required to update them to include newly discovered cases and to reflect changes which occur in cases after the end of the calendar year.
4. Except when specifically notified by the Bureau of Labor Standards, two categories of employers normally do not have to keep OSHA records: (1) employers with no more than 10 employees at any one time during the previous calendar year; and (2) employers in certain low-hazard industries such as retail trade; finance, insurance, and real estate; and services. Although these employers are normally exempt from OSHA recordkeeping, they must report work-related fatalities and multiple hospitalizations. A small group of the normally exempt employers may also be asked to maintain OSHA records for a specific year if chosen to participate in the survey. A random group of these low hazard companies must also participate in the survey in order to produce accurate estimates for all industries.

## Appendix D (continued)

### Recordkeeping Summary

Basic recordkeeping concepts and guidelines are included with instructions on the back of the OSHA-200 Log. The following summarizes the major recordkeeping concepts and provides additional information to promote accurate recordkeeping.

### Determining Recordability

Under the OSH Act, all work-related illnesses must be recorded. Injuries are recordable if they require medical treatment (beyond first aid) or involve days away from work, loss of consciousness, restriction of work or motion, or transfer to another job.

An occupational **injury** is an event such as a cut, fracture, sprain, amputation, etc., which results from a work accident or from an exposure involving a single incident in the work environment.

An occupational **illness** is an abnormal condition or disorder, other than one resulting from an occupational injury (an instantaneous or one-time event), caused by exposure to environmental factors at work. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact.

An injury or illness is considered work-related if it results from an event or an exposure in the work environment. The work environment is primarily composed of the following: (1) the employer's premises, and (2) other locations where employees are engaged in work-related activities or are present as a condition of their employment. The employer's premises encompass the total establishment including areas such as company storage facilities, cafeterias, and restrooms. Parking lots are not considered part of the work environment unless an employee is performing a work-related activity. In addition to physical locations, equipment or materials used by the employee in the course of an employee's work are also considered part of the employee's work environment.

In addition to location or work environment criteria, there are other criteria for determining recordability. All fatalities are recordable. All recognized or diagnosed illnesses that are work-related are recordable. For injury cases, each case must meet at least one of the following:

1. Days away from work
2. Restriction of work or motion
3. Transfer to other work temporarily
4. Medical treatment beyond first aid
5. Loss of consciousness

See appendix G for information on OSHA recordkeeping, publications, and internet sites.

## Appendix D (continued)

### Incidence Rates

Incidence rates are a measure of the likelihood that an employee will suffer a work-related injury or illness. Incidence rates represent the number of OSHA recordable injuries, illnesses or both per 100 full-time workers. This rate allows year-to-year and industry-to-industry comparisons of injury and illness data even when the employment and hours worked are different. The key is the adjustment factor of 200,000 hours.

The formula for calculating an incidence rate is:

$$\frac{N \times 200,000}{EH}$$

N = the number of OSHA recordable cases in the reference year.

EH (Exposure Hours) = the total number of hours worked by employees at risk.

200,000 = the hours worked by 100 full-time employees in one calendar year less two weeks for time off (50 weeks) based on a 40 hour work-week.

For example:

#### Company ABC

Number of recordable cases = 5

Number of Employees = 40

Full-time hours = 75,000

Part-time hours = 5,000

Exposure Hours (EH) =  $75,000 + 5,000 = 80,000$

Incidence rate =  $\frac{5 \times 200,000}{80,000} = 12.5$  cases per 100 full-time workers.

### OSHA Recordkeeping vs. Workers' Compensation

The OSHA Recordkeeping system and the Workers Compensation system are two programs that serve separate purposes. Each of these two reporting systems has its own distinct set of rules and definitions regarding the recordability and reportability of injury and illness cases occurring in the workplace.

## Appendix D (continued)

The OSHA Recordkeeping system is a product of the OSH Act of 1970. The Act requires employers in the private sector who are subject to the OSH Act, to comply with regulations and standards developed to increase worker safety and health. Among these are injury and illness recordkeeping and reporting regulations which require covered employers to maintain records of occupational injuries and illnesses. The reporting forms are the OSHA 200 Log and OSHA 101 supplemental form. The OSHA Recordkeeping system is consistent throughout the U.S and its territories.

The Workers' Compensation system compensates employees injured in the workplace. Its purpose is to hear claims, provide worker advocacy mediation, oversee rehabilitation activities, investigate abuse, and monitor individual cases. Its primary reporting form is the First Report of Injury or Disease. Workers' Compensation rules can vary, sometimes dramatically, from state to state.

### Estimation Procedure

Estimates of injury and illness cases and rates for each industry are obtained by first weighting the data for each reporting unit by the reciprocal of the sampling ratio for each industry and employment size group. For example, if one company is chosen from a group of 5 companies with equal size and within the same Standard Industrial Classification code (SIC), the weight for this unit chosen would be  $5/1 = 5$ . This one unit would now represent all five companies.

Each of the sampling cell estimates is then adjusted for nonresponse. Finally, the aggregate data for each industry is adjusted for births (new companies) by benchmarking, a form of ratio estimation using an independent determination of actual employment.

### Standard Industry Mix

Incidence rates vary greatly between industries. Therefore, caution is necessary when making comparisons between incidence rates produced for different jurisdictions. For instance, a state with a higher concentration of employment in high risk industries will likely have a higher total case incidence rate than a state with a lower concentration of higher risk industries. To overcome this inequity, estimates for each state can be recalculated to a common employment base (U.S. employment) using data from the level lower than the level being compared. (See Table K). For example, if the desired result was an All-Industry state incidence rate adjusted to the national mix of industries, data from the Industry Division (2 digit SIC) level would be used. This process is called the Standard Industry Mix (SIM). The formula is shown below.

$$\frac{(X_i * Y_i)}{(X_i) - X_o}$$

$X_i$  = National employment for the  $i$ th industry  
 $Y_i$  = Unadjusted incidence rate for the  $i$ th industry  
 $X_o$  = Employment for industries which are not present in the state

## Appendix E

### OSHA Recordkeeping Guidelines

- An injury or illness is considered work-related if it results from an event or exposure in the work environment
- The work environment includes the employer's premises and other locations where the employee is engaged in work-related activities. The work environment includes cafeterias and restrooms but not parking lots, unless they are part of the work area.
- All work-related fatalities are recordable.
- All recognized or diagnosed work-related illnesses are recordable
- All work-related injuries involving lost worktime, restricted worktime (temporary transfer to another job, or being able to work part-time on the regular job, or working full-time on light duty or with restrictions), loss of consciousness, or medical treatment (as defined below) are OSHA recordable.
- Injuries requiring First Aid as defined below are not recordable.

**NOTE: The focus is on the type of treatment that was provided or should have been provided. The focus is not on who the individual went to or where the individual went. Going to a doctor or to a hospital does not necessarily make a case OSHA recordable.**

#### Medical Treatment

The following procedures are generally considered medical treatment. An injury requiring medical treatment is almost always recordable if the injury is work-related:

- Treatment of infection
- Application of antiseptics during the second or subsequent visit to medical personnel
- Treatment of second or third degree burns
- Application of sutures (stitches)
- Application of butterfly adhesive dressing(s) or steri strip(s) in lieu of sutures
- Removal of foreign bodies embedded in eye
- Removal of foreign bodies from wound if procedure is complicated because of depth of embedment, size, or location
- Use of hot or cold soaking therapy during second or subsequent visit to medical personnel

## Appendix E (continued)

- **Cutting away dead skin (surgical debridement)**
- **Application of heat therapy during second or subsequent visit to medical personnel**
- **Use of whirlpool bath therapy during second or subsequent visit to medical personnel**
- **Positive x-ray diagnosis (fractures, broken bones)**
- **Admission to a hospital or equivalent medical facility for treatment**
- **Two or more visits for physical therapy**

### **First Aid Treatment**

First aid treatment is one-time treatment and subsequent observation of minor injuries. The following procedures are generally considered first aid treatment and should not be recorded if the injury does not involve loss of consciousness, restriction of work or motion, or transfer to another job.

- **Application of antiseptics during first visit to medical personnel**
- **Treatment of first degree burns**
- **Application of bandages during any visit to medical personnel**
- **Use of elastic bandages during first visit to medical personnel**
- **Removal of foreign bodies not embedded in eye if only irrigation is required**
- **Removal of foreign bodies from wound if procedure is uncomplicated (for example, by tweezers or other simple technique)**
- **Use of nonprescription medications and administration of single dose of prescription medication on first visit for minor injury or discomfort**
- **Soaking therapy on initial visit to medical personnel or removal of bandages by soaking**
- **Application of hot or cold compresses during first visit to medical personnel**
- **Application of ointments to abrasions to prevent drying or cracking**
- **Application of heat therapy during first visit to medical personnel**
- **Use of whirlpool bath therapy during first visit to medical personnel**
- **Negative x-ray diagnosis**
- **Observation of injury during visit to medical personnel**

**Administration of Tetanus Shots or Boosters** by itself, is not considered medical treatment. However, these shots are often given in conjunction with more serious injuries. Consequently, injuries requiring these shots may be recordable for other reasons.

## Appendix F

### GLOSSARY

**Average lost workdays per lost workdays case:** The number of lost workdays divided by the number of lost workday cases.

**Days away from work:** The number of days beyond the day of injury or onset of illness (consecutive or not) the employee would have worked but was absent from work because of occupational injury or illness. The number of days away from work does not include the day of injury or the onset of illness.

**Days of restricted work activity:** The number of workdays (consecutive or not) on which, because of occupational injury and illness, one or more of the following occurs: (1) the employee was assigned to another job on a temporary basis; (2) the employee worked at a permanent job less than full time; or (3) the employee worked at a permanently assigned job but could not perform any or all duties normally connected with it.

**Employment-size Group:** Establishments within a specified range of average employment.

**Establishment:** A single physical location where business is conducted or where services or industrial operations are performed. Distinctly separate activities are performed at a single physical location, such as construction activities operated from a separate establishment.

**First-Aid treatment:** A one-time treatment and subsequent observation of minor scratches, cuts, burns, splinters, etc., which do not ordinarily require medical care.

**Incidence rate:** The number of injuries and illnesses or lost workdays experienced by 100 full-time workers.

**Industry Division** - see Standard Industrial Classification

**Industry Group** - see Standard Industrial Classification

**Lost workdays:** The sum of days away from work and days of restricted work activity (see above). The number of lost workdays does not include the day the injury occurred or the day the illness was discovered.

**Medical treatment:** Includes treatment administered by a physician or by registered professional personnel under the standing orders of a physician. However, medical treatment does NOT include first-aid treatment (one-time treatment and subsequent observation of minor scratches, cuts, burns, splinters, etc.) which does not ordinarily require medical care even though provided by a physician or registered professional personnel.

**Occupational fatality:** Death resulting from a traumatic accident or an exposure in the work environment.

## Appendix F (continued)

### GLOSSARY

**Occupational illness:** Any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to environmental factors associated with employment. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact, and which can be included in the categories listed below. The following categories are used by employers to classify recordable occupational illnesses:

**(7a) Occupational skin diseases or disorders**, for example: contact dermatitis, eczema, or rash caused by primary irritants and sensitizers or poisonous plants; oil acne, chrome ulcers; chemical burns or inflammations; etc.

**(7b) Dust diseases of the lungs (pneumoconioses)**, for example: silicosis; asbestosis; coal worker's pneumoconiosis; byssinosis, siderosis; and other pneumoconioses.

**(7c) Respiratory conditions due to toxic agents**, for example: pneumonitis, pharyngitis, rhinitis or acute congestion due to chemicals, dusts, gases or fumes; farmer's lung; etc.

**(7d) Poisoning (systemic effects of toxic materials)**, for example: poisoning by lead, mercury, cadmium, arsenic, or other metals; poisoning by carbon monoxide, hydrogen sulfide or other gases; poisoning by benzol carbon tetrachloride, or other organic solvents; poisoning by insecticide sprays such as parathion, lead arsenate; poisoning by other chemicals such as formaldehyde, plastics and resins; etc.

**(7e) Disorders due to physical agents (other than toxic materials)**, for example: heatstroke, sunstroke, heat exhaustion and other effects of environmental heat; freezing, frostbite and effects of exposure to low temperatures; caisson disease; effects of ionizing radiation (isotopes, x-rays, radium); effects of nonionizing radiation (welding flash, ultraviolet rays, microwaves, sunburn); etc.

**(7f) Disorders associated with repeated trauma**, for example: noise-induced hearing loss; tendonitis, carpal tunnel syndrome, synovitis, tenosynovitis, and bursitis; Raynaud's phenomena; and other conditions due to repeated motion, vibration, or pressure.

**(7g) All other occupational illnesses**, for example: anthrax; burcellosis; infectious hepatitis; malignant and benign tumors; food poisoning; histoplasmosis; coccidiomycosis; etc.

**Occupational injury:** Any injury such as a cut, fracture, sprain, amputation, etc., which results from a work accident or from exposure involving a single incident in the work environment.

**Publishable industry level:** An industry level (Division, Group, etc.) for which (1) average employment exceeded 1,500 during the survey year, and (2) no one firm or small number of firms so dominated the industry so as to jeopardize the guaranteed confidentiality of OSH Survey data.

## Appendix F (continued)

### GLOSSARY

**Recordable occupational injuries and illnesses:** Any occupational injuries or illnesses which result in (1) FATALITIES, regardless of the time between the injury and death, or the length of the illness; (2) LOST WORKDAY CASES, other than fatalities, that result in lost workdays; or (3) NONFATAL CASES WITHOUT LOST WORKDAYS, which result in transfer to another job or termination of employment, require medical treatment, or involve loss of consciousness or restriction of work or motion. The third category also includes any diagnosed occupational illnesses which are reported to the employer but are not classified as fatalities or lost workday cases.

**SIC** - see Standard Industrial Classification

**Standard Industrial Classification:** A classification system developed by the Office of Statistical Standards, Executive Office of the President/Office of Management and Budget for use in the classification of establishments by type of activity in which they are engaged. Each establishment is assigned an industry code for its major activity which is determined by the product, group of products, or services rendered. Establishments may be classified in 2-digit, 3-digit, or 4-digit industries, according to the degree of information available. An industry division is the broadest level (other than the total private sector) at which estimation is performed in OSH Survey in Maine, and is identified by a range of SIC codes. (For example, SIC 20 through 39 represent the Manufacturing Division). An industry group is identified by one 2-digit code.

## Appendix G

### MAINE'S CONSULTATION AND TRAINING PROGRAMS

The Maine Department of Labor, Bureau of Labor Standards offers safety consultation and training programs to private and public employers in the state. The services are provided free of charge. The Bureau of Labor Standards operates in a non-enforcement manner and attempts to foster safety awareness and voluntary compliance. Through these programs, occupational health and safety professionals:

- ....assist Maine employers to develop and maintain healthy and safe workplaces.
- ....provide **penalty-free** and **cost-free** safety and health consultations.
- ....discuss the problems found during consultations and suggests ways to correct them.
- ....provide a written report covering problems discovered during the consultation, including suggestions for correcting them.
- ....offer a pre-construction review of plans or specifications for potential safety and health problems.
- ....offer training in many occupational safety and health topics.

**If you would like more information or would like to request training or consultation, call the Bureau of Labor Standards' Workplace Safety and Health Division at 624-6400, or write to 45 State House Station, Augusta, Maine 04333-0045.**

### MAINE'S LOW INTEREST LOAN PROGRAM

The State of Maine has a low interest loan program for Maine employers who wish to purchase equipment to improve the health and safety of their workplaces. Loans up to \$50,000 are provided at 3% interest for a maximum repayment period of 10 years. **For further information about this program call the Bureau of Labor Standards at 624-6400.**
